English Abstract

An apparatus and method for processing financial transactions include the
capability to receive a first message indicating the making of a
financial transaction, the message containing customer information and

transaction information. The apparatus and method also include the capability to determine the validity of the customer information and to generate a second message indicating non-authorization of the financial transaction if the customer information is invalid. The apparatus and method additionally include the capability to determine whether the financial transaction involves a micro-payment if the customer information is valid and, if the financial transaction involves a micro-payment, store at least part of the transaction information and generate a third message indicating authorization of the financial transaction. The apparatus and method further include the capability to generate an authorization request if the financial transaction does not involve a micro-payment.

French Abstract

La presente invention concerne un appareil et un procede permettant le traitement de transactions financieres comprenant la capacite de recevoir un premier message indiquant la realisation d'une transaction financiere, le message contenant une information de client et une information de transaction. L'appareil et le procede comprennent egalement la capacite de determiner la validite d'une information de client et de generer un deuxieme message indiquant la non autorisation de la transaction financiere si l'information de client est invalide. En outre, l'appareil et le procede comprennent la capacite de determiner si la transaction financiere implique un micropaiement si l'information de client est valide et, si la transaction financiere implique un micropaiement, memorisent au moins une partie de l'information de transaction et generent un troisieme message indiquant l'autorisation de la transaction financiere. Enfin, l'appareil et le procede comprennent egalement la possibilite de generer une requete d'autorisation si la transaction financiere n'implique pas de micropaiement.

Abstract (Basic): US 20020128917 A1

NOVELTY - A processor generates a message indicating non-authorization of the financial transaction, if the stored customer information is invalid, else, determines whether the financial transaction involves a micro-payment. The processor instructs the memory to store a portion of the transaction information and generate a message indicating the transaction authorization if the transaction involves micro-payment, else an authorization request is generated.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

- (1) Financial transaction processing method; and
- (2) Set of logic encoded in medium for carrying out financial transaction.

USE - For financial transaction using credit card, debit card, and for catalog retailers.

ADVANTAGE - The number of exchange of information utilized in authorizing certain financial transaction is reduced, while at the same time merchants are protected from invalid financial transaction. The financial transactions are authorized in less time, thereby the anxiety of customers and merchant is reduced.

DESCRIPTION OF DRAWING(S) - The figure illustrates a system for processing financial transaction.

**Financial transactions processing apparatus for catalog retailers,
generates message indicating authorization of financial transaction
if financial transaction involves micro - payment**

Abstract (Basic):

... A processor generates a message indicating non- authorization
of the financial transaction , if the stored customer information is
invalid, else, determines whether the financial transaction involves
a micro - payment . The processor instructs the memory to store a
portion of the transaction information and generate a message
indicating the transaction authorization if the transaction involves
micro - payment , else an authorization request is generated.

**Financial transactions processing apparatus for catalog retailers,
generates message indicating authorization of financial transaction
if financial transaction involves micro - payment**

Abstract (Basic):

... A processor generates a message indicating non- authorization
of the **financial transaction** , if the stored customer information is
invalid, else, determines whether the financial transaction involves a
micro - payment . The processor instructs the memory to store a portion
of the transaction information and generate a message indicating the
transaction authorization if the transaction involves **micro - payment**
, else an authorization request is generated.

... The number of exchange of information utilized in **authorizing**
certain **financial transaction** is reduced, while at the same time
merchants are protected from invalid **financial transaction** . The
financial transactions are **authorized** in less time, thereby the
anxiety of customers and merchant is reduced...

AU 200115395 A G06F-017/00 Based on patent WO 200144968

Abstract (Basic):

... risk of spending the tokens twice by a given individual, as in
the case of **DigiCash** (RTM). There is no need to retain a list of all
tokens, which are ever...

...re-assignment of ownership is checked by separating tasks of authorising
spending party to a **transaction** and **authorising** the value to be
transferred in a transaction, using remote or geographically separate
servers, purse...

Source: Company reports and Salomon Smith Barney

SH Investment Thesis And Overview

TEXT

In Indonesia, gas purchase contracts are as important to Gulf's production and cash flow as are the actual reserves to support production to fulfill those contracts. At present, Gulf has more than enough reserves and productive capacity to fulfill existing contracts. The good news is that Gulf Indonesia has recently signed a number of new and significant long-term contracts that promise to provide buyers for Gulf's Indonesian gas volumes for many years to come.

STN

Unconventional Oil Projects--Syncrude, Surmont, and Petrovera

We estimate 13% of total derived upstream asset value is from Gulf's Syncrude interest.

Gulf Canada owns a 9.03% interest in the Syncrude Project, which produces a light sweet crude oil from oil sands deposits within the Athabasca region of northeastern Alberta. Syncrude holds proven reserves of around 2.5 billion barrels and probable and possible reserves of an additional 6.0 billion barrels. Based on proven reserves alone, and 1999 production of approximately 80 million barrels, Syncrude has a reserve life of more than 31 years. Long-term development projects underway at Syncrude will set the stage for a doubling of volumes to 170 mmbbls/year by 2008. We estimate that around 13% of total derived upstream asset value is from Gulf's Syncrude interest.

Of more than 3 billion barrels of deemed recoverable reserves at Surmont, only a small fraction have been booked as proved.

Gulf's Surmont lease in northern Alberta contains an estimated 15 billion barrels of bitumen in place, of which 3.0 billion to 7.5 billion barrels are estimated to be recoverable using steam assisted gravity drainage (SAGD) technology. Expectations are that Surmont may support eventual production of 100 mbpd for over 150 years. Only a very small amount of identified reserves at Surmont, those associated with an

ongoing pilot project, have been booked as proved. Gulf is currently working with TotalFinaElf on the implementation of an accelerated development program at Surmont. In related news, earlier this month the Alberta Energy and Utilities Board approved Gulf's request that gas wells currently producing on the company's Surmont lease be ordered to shut in production. Nearly 150 wells have been ordered to shut in production as of May 1, 2000. Gulf had argued that pressure depletion of the gas pools in association with the oil sands would adversely affect the recovery of bitumen from the reservoir.

We estimate heavy oil reserves contribute around \$360 million of value, or 6% of our estimate of total Gulf upstream asset value.

QUESTIONS AND ANSWERS

1) As we consolidate from 41 to 15 printing plants, what are the risks concerning prices that we might have to pay in terms of customer service, of profitability, or the expense associated with the project?

Two points. First, Deluxe has experience in consolidating plants. We had 64 two and a half years ago and it moved to 41 with a universal agreement from the banking industry and with no disruption whatsoever to their abilities to continue to meet their customers' expectations. The second point is we operate our plants today on one shift and a five-day-a-week operation. Most printing factories are going two or three shifts, six or seven day or six-and-a-half-day operation. What we will be doing as we consolidate is going to a minimum of two shifts, six days a week and very probably to a three-shift, five-or six-day operation. In other words, we have substantial amounts of excess capacity throughout those 41 plants. We'll consolidate to 15 and still have about 25% excess capacity left. Now we know how to stage the work from factory A to factory B because we've been doing it for quite a while. We've also invested something approaching \$40 million over the last year and a half in an electronic order entry system that will let us automatically take a work order coming from a bank or a reorder coming from a customer and load it into the plant with enough capacity at that moment to produce the product. We will be able to balance and more quickly and accurately load the printing machines from the customer order than we are able to today. There are additional printing enhancements coming on-line in the next year that we probably couldn't afford to put into 41 plants, but we absolutely can afford to put into 15 plants. I've spoken with many bankers to assure them that, as in the past, we believe we will be in a position simply to make the transaction in a seamless, painless way and we've built some fall-safe mechanisms into the transition that will freeze the activity right away until we've got that problem cleared.

You asked about expenses associated with the project. We have identified and took as write-offs small amounts at the end of 1995 and in the first quarter of this year-somewhere between \$30 and \$35 million-to complete all of the costs associated with the closing down of those 26 additional facilities. There will be some income, we're not sure just how much from some of those sales. We have buildings and land that are desirable in some places, probably not in others. We believe that we have accounted for the write-off all of the expenses associated with it and we believe that we will be pushing these programs sanely but quickly to complete the consolidation by the end of next year.

SH Accounting Practices

TEXT

VI. ACCOUNTING PRACTICES

The Accounting Practices Board of South Africa issues statements of generally **accepted** accounting practice. Accounting statement AC 120

deals with the disclosure in financial statements of banks in SA.

This

statement comes into effect for financial statements of banks covering all periods commencing on or after 1 January 1996. Many banks are to a lesser or greater extent complying with its requirements already. The statement conforms generally to the international accounting statement IAS 30, with some additional requirements.

Generally **accepted** accounting standards do not currently have legal backing but this should come into effect some time during 1996.

A. Consolidation

The holding companies of banking groups in SA provide consolidated financial statements. Subsidiary companies are those in which the holding company owns more than 50% of the voting rights. Investments of 20-50% in the equity of a company (associated companies) are generally accounted for by the equity method.

There is no standard treatment for goodwill in consolidated accounts. It is either amortised over a period usually not exceeding 25 years or written off against the capital on acquisition.

B. Investment Securities

Investments are treated in line with the international statement on investments.

C. Provision for Bad Debts

Banks in South Africa follow the UK practice by making specific and general provisions for bad and doubtful debts. Specific provisions

STN

are matched to specific doubtful or bad advances (loans), whereas the general provisions create a reserve for a pool of advances. Specific provisions are fully tax deductible while only 25% of general provisions are **allowed** as a tax deduction.

The Registrar is not prescriptive in its definition of overdue accounts (i.e. 90 days). Provisions for bad debts are therefore determined according to each bank's own policy.

D. Taxation

The current corporate tax rate in South Africa is nominally 35%, which is 5% lower than the previous year. However, a 25% additional tax (secondary tax on companies) is levied on dividends declared or paid. This takes the effective tax rate to a maximum of 51,25% in normal situations if the full distribution should occur from current earnings. Capital gains are not taxed. Deferred tax is provided for on the liability method on either a comprehensive or partial basis. Most companies are however providing deferred tax according to the comprehensive method.

Banks are further subjected to a financial services levy of 0,75% per quarter, calculated on 50% of qualifying capital as **determined** for capital adequacy requirements.

E. Cash and Short-Term Funds

This item includes cash, deposits with other banks and the Reserve Bank, treasury bills and other short-term securities. Deposits with the Reserve Bank are interest free and form part of their liquid asset requirements.

F. Remittances in Transit

This item is either disclosed on the face of the balance sheet or in the accompanying notes. The amount is normally relatively small compared to the overall size of the balance sheet.

G. Advances

Advances are shown on the balance sheet net of specific and general provisions for bad debts. A substantial portion of South African banks' advances is bank overdrafts. They are technically withdrawable on demand but facilities are normally granted for a year. They are reviewed annually by the branch and generally extended for another year so that they effectively become medium-term loans.

H. Acceptances and Contingent Liabilities

Liabilities of customers for **acceptances** are disclosed on the face of the balance sheet as contra items. Contingent liabilities generally include guarantees on behalf of customers and letters of credit. They are normally not shown on the balance sheet (except for Nedcor that includes them as contra items) but are disclosed by way of note.

Regulation

The Public Utility Commission of Ohio (PUCO) has jurisdiction over Centerior's retail revenues. In July, Cleveland Electric received a decision on a \$231-million request, allowing a \$37-million hike based on a 16.63% return on equity (ROE). Cleveland has refiled for a \$217-million increase pending the operation of the Perry unit 1. Toledo Edison has refiled for a \$109-million rate rise. Both cases support a 16.3% allowed return. The company received a \$39-million rate boost based on 16.6% ROE when Perry 1 reached 20% power in March. A prudence audit released in August by the consultant was generally positive: Centerior was found at fault for only a small amount, but its vendor was identified for a much larger penalty. The Consumer Council will argue a higher level of imprudence. The results of the generic excess capacity study are not expected soon.

Key Issues/Upcoming Events

* The rate proceeding should be concluded by the third quarter;
a
prudence decision on the Perry unit 1 investment is not expected until

EKD 10/03/2003

STN

after that rate decision.

* A decision on interim rate relief for Toledo Edison is pending.

Risk/Reward

* Upside: the stock offers a high yield.

* Downside: problems with the construction, licensing, or rate treatment of the nuclear plants under construction could affect the level of the dividend.

SH Summary and Recommendation

TEXT

SUMMARY AND RECOMMENDATION

Precision Castparts is the dominant manufacturer of large, complex, structural investment castings in the Free World. These products, made of either stainless steel or alloys of nickel, cobalt, and titanium, find their major use in jet aircraft engines. The size of the parts, the precision required, and the complex alloys used, make the manufacturing process extremely difficult, providing the Company with its main competitive advantage.

Though Precision Castparts is celebrating its thirtieth anniversary this year, it has been publicly traded for only half that time. Over the past five years its sales have grown at a rate of 18 percent, and its earnings per share have grown at a 19 percent rate. These respective rates were 30 percent and 28 percent in fiscal 1981, before Precision Castparts fell victim to the recession. We believe that the Company's earnings are on the verge of once again achieving growth rates in the mid-twenties and that now is the time to purchase the stock.

SH Market Description

TEXT

MARKET DESCRIPTION

The Investment Casting Market

The investment casting process is the modern day derivative to the lost wax process used by the ancient Egyptians to create such treasures as the bust of Pharaoh Tutankhamen. Today, the process begins by the manufacturer of a tool in the form of a negative of the part to be produced. This tool is then filled with wax, cooled, and opened to

STN

reveal a wax replica of the part. The replica is then coated with a ceramic shell, the investment, which is heated to allow the wax to melt

away. Again, we have a negative of the part to be produced. This ceramic mold is then heated and filled with the molten metal alloy, which will become the finished product. Once cool, the ceramic investment is broken away to reveal the end product. A small

amount of

finishing and a considerable amount of inspection are then performed. As an example of the labor savings which can be achieved by the process, one part on which Precision Castparts is now beginning production, replaces a piece previously assembled from 96 separate parts.

By the Company's estimate, the total market for investment castings in 1983 was \$1 billion. Of that, one-half was for jet engine blades and vanes, a category in which Precision Castparts does not compete. Of the remaining half, approximately 20 percent was for large investment castings. Precision Castparts estimates its share of this latter market is 85 percent. The Company believes that the 15 to 20 percent growth the market has experienced in recent years will continue into the foreseeable future.

Sanofi-Synthelabo will provide Genset with research funding, research and clinical milestones, plus royalties on sales of any product where the data from this collaboration were actively used in the development of the compound.

We believe that deals like this one represent the future direction of pharmacogenomics, in which the genetic basis of drug response is applied directly to real time drug development.

Future Prospects

Abbott and Genset may have been ahead of their time

Genset's first alliances (with Abbott and Pharmacia) were so-called "retrospective" pharmacogenomics deals, whereby the companies seek genes related to adverse reactions or increased efficacy of marketed drugs. Although when signed, these deals were cutting-edge, we believe they are unlikely to advance to product re-filings. In general, the expense of additional clinical trials may outweigh the benefit of a label change that excludes patients with a particular genotype related to an adverse response to the drug.

Pharmacogenomics is better applied to real time drug development

Instead, we expect to see more "prospective pharmacogenomics" deals (such as the Sanofi-Synthelabo deal), whereby genotypes that confer adverse drug responses (or improved efficacy) are identified during drug development, leading to selection of the safest and most effective compound to be sold on the market.

* Gene Libraries

Genset's original deal with Genetics Institute (GI) was for Genset to augment GI's DiscoverEase (R) library of secreted protein genes with more genes from Genset's own proprietary secreted protein DNA sequence database, SignalTag (TM). DiscoverEase was established as an early proteomics service, in which customers could sign up to have access to

STN

a library of gene sequences of secreted proteins, plus small
amounts of
the proteins the genes coded for. The DiscoverEase customers could then
use the samples from the library for their drug screening efforts.

This was a good deal for Genset, because it allowed
the company to
access potential users of its SignalTag database, while utilising GI's
distribution infrastructure.

TT Table 11: Genetics Institute Deal

SH Streaming And Digital Media Opportunity

EKD 10/03/2003

STN

TEXT

Demand side: the durability, accessibility, and convenience of digital music is expected to reinvigorate music demand just as the compact disc did throughout the 1980s and 1990s. And, the format is expected to eventually dominate music sales as compact discs do now. Compact disc sales are projected to account for 95% of all non-digital music sales by 2007, up from 46% in 1990. We believe the dominance of CDs over other physical media underscores the importance of durability, accessibility, and convenience to retail music purchasers. Though digital music sales have been constrained by piracy and copyright issues, the size of the opportunity and the maturity of traditional-format music sales are sufficient incentives for the music industry to embrace digital distribution.

(Graphical Material Omitted - Call Your Client Service Representative For Availability: Exhibit 3 - New Formats Dominate And Catalyze Retail Music Growth 1990-2007)

The size and immediacy of the streaming and downloading opportunities depend on a number of developments. A number of factors should **determine** if, when, and to what extent the market projections for streaming media and digital music are realized. RealNetworks' influence on these factors varies. Exhibit 4 lists several of the most significant factors and an assessment of RealNetworks' influence on each.

TT Exhibit 4 -Catalysts For Streaming And Digital Media

TEXT

EXHIBIT 4: CATALYSTS FOR STREAMING AND DIGITAL MEDIA

	RealNetworks' influence:	
	High	Low
Reduced streaming/ digital format confusion	Development of digital rights management/security	Broadband penetration
Value-added services, e.g., advertising insertion	Availability of compelling video and audio content	Digital music business models/role of traditional intermediaries
Proliferation of streaming creation, distribution, and playback tools	Proliferation of digital music- playing devices	Internet micropayments systems
Streamed video quality	Music industry comfort with digital distribution	

Source: WR Hambrecht + Co

SH Streaming And Digital Media Opportunity

EKD 10/03/2003

STN

TEXT

Of all the factors over which RealNetworks has greatest control, reducing format confusion may be the most important factor to accelerate the streaming media market. However, it is very unlikely that this will occur. RealNetworks and Microsoft are locked in a sometimes acrimonious battle for the streaming media market. Both organizations promote proprietary formats, which cannot be served or played on competing software and devices without cross-licensing agreements. As a result, content providers wishing to maximize exposure to their audio and video content must encode in multiple formats and purchase multiple servers. (Not to mention provide back office support for multiple products, deal with multiple vendors, etc.) **Agreement** on a streaming standard, or the defacto emergence of one, means defeat for either RealNetworks or Microsoft. As a result, expect the Babylonian format confusion to continue.

TEXT

Linux

An increasingly popular freeware UNIX operating system.

Lynx

A text-based www browser. After a fall in popularity, this is currently undergoing a renaissance as handheld internet devices, which have difficulty displaying graphics, have small bandwidth and surf the internet using text only.

'M'

Mail Relay

EKD 10/03/2003

STN

A mail server which forwards e-mail on to its correct destinations.

Mail Server

Computer that transports and stores internet messages.

Mailing List

An automated system that allows people to send e-mail to one address whereupon their message is copied and sent to all of the other subscribers.

Mbps (Megabits per second)

The unit of measure for the speed of data transfer.

Megabit

1048576 bits.

Megabyte

Equivalent to 1024 Kilobytes. This is roughly the capacity of a computer disk.

Metatag

An optional HTML tag used to specify information about a website. This is used to aid search engines.

Micro-Payments

An e-commerce transaction system that allows even the smallest payments to be made. It is typically used in the sale of information such as newspaper articles.

MIME (Multi-purpose Internet Mail Extensions)

Defines how material other than straight ASCII text is sent between computers. MIME sends all formats in plain text form and includes a mail header at the beginning of each message identifying the type of format. It is the standard for attaching non-text files to e-mail messages.

MIME Types

The different types of file format that are transmitted using MIME encoding.

Mirror Sites

Websites that maintain exact copies of material originated at another location, usually in order to provide more widespread access to the resource. If too many users are accessing the original site and slowing download times, the mirror site speeds access, spreading the

STN

downloading out over a number of websites rather than at one site.

Modem

Translates the digital data from a computer into analogue sounds that can be carried over a phone line to another modem, where they are then translated back to data. They are used to connect computers to the internet.

Mosaic

This was the first browser developed that allowed viewing of graphics as well as text over the internet. It was developed at the NCSA in Illinois.

MP3

A new internet standard for the compression of CD standard audio files. Typically used to distribute music over the internet.

MPEG (Motion Picture Experts Group)

A type of multimedia file found on the internet. In order to hear or see an MPEG movie users need to install a helper application or Web browser plug-in. MPEG uses an algorithm for compressing audio and video which enables the files to be transmitted across the internet significantly quicker than other audio and video files.

SH Item 1: Approve Acquisition Of Regal U.s.

TEXT

The acquisition will also be funded with new bank facilities totaling \$370 million provided by HSBC and ING Barings. Should the placing and the new facility raise more than is required for the acquisition, all extra funds will be used to pay for acquisition expenses.

EKD 10/03/2003

STN

Millennium has not disclosed whether the acquisition will be earnings-enhancing in its first year or otherwise. Neither has it **revealed** whether the structure of the **transaction** will **allow** the enlarged company any cost savings or other synergies other than a general statement that it will achieve modest cost and revenue synergies. Millennium has also not reproduced a pro-forma statement of net assets that would indicate how the purchase of Regal's U.S. hotels is expected to affect its assets and its debt levels. We prefer that company's disclose this information so that shareholders may make more informed voting decisions.

Strategic Rationale

Millennium & Copthorne Hotels Plc is a growing luxury hotel chain, with hotels in the United Kingdom, Europe, and Asia. Its presence in the large and lucrative U.S. market has been, until this transaction, limited to New York City. Millennium acquired CDL Hotels Asia-Pacific in April of this year in a transaction that transformed the company into a leading, international hotelier virtually overnight, doubling the number of rooms and the number of hotels in its portfolio (the transaction also gave the owners of CDL a 52.5-percent controlling interest in the company).

The company sees this transaction as a real opportunity to expand its still minimal presence in the United States the world's largest hotel market. Millennium is especially interested in hotels located in major gateway cities, including Los Angeles, Boston, Chicago, Minneapolis, and St. Louis.

The company believes that the 28 new hotels, 12 of which currently carry the Regal brand name, are an excellent addition to Millennium's current portfolio of hotels. Among the benefits of the transaction are the following:

The 12 Regal hotels are upscale business hotels, with conference facilities, fitness clubs, swimming pools, and first-class dining and catering facilities.

A powerful presence in New York City. In addition to its existing hotels, (the Millennium Broadway, Millennium Hilton, and The Plaza), it will acquire the Regal UN Plaza.

The company will have a much larger brand presence in the U.S. market.

The opportunity to increase revenues and profits across the portfolio. Millennium has disclosed that the Regal properties have been underperforming the rest of the market in recent years. By applying its own marketing strategies and investing **small amounts** of additional capital, Millennium hopes to increase revenues across each of the newly acquired hotels.

The acquisition also comes at a time of increasing competition and consolidation in the global hotel industry; many international chains are attempting to merger their reservation and other, back-office systems in an effort to control costs.

Sovereign Redirection Risk

A major risk to this transaction is that in the event of a severe foreign currency shortage, the Turkish government or central bank may attempt to centralize and ration access to foreign exchange. Under such a scenario, Garanti could be directed to remit all its foreign currency flows, including trade payment related flows, to the central bank. Theoretically, the sovereign could try to redirect these flows primarily by:

- * Directing Garanti to change payment instructions on sold TPRs for credit to an account at a correspondent bank that is not party to the transaction;

- * Directing Turkish exporters to process documents through Turkish state banks for negotiation and collection;

- * Notifying importers and issuing banks directly to send payments to an account other than the concentration accounts; and/or

- * Directing Garanti, in breach of its agreement, not to correctly identify TPRs to the correspondent bank to distinguish them from other foreign currency items belonging to Garanti.

DCR believes that the risk of sovereign interference is significantly mitigated due to the following factors:

- * Incentive for Interference. DCR believes that the sovereign would have little incentive to redirect these flows since a significant portion (approximately 90% at closing) of the TPR flows are not being used to service debt and are remitted back to Turkey on a regular basis. Similar to certain other remittance transactions, this transaction has initial coverage levels near 13 times the maximum quarterly debt service. Thus, interfering in this transaction would only provide the government with a small incremental amount of foreign

STN

currency. Under the terms and conditions of the transaction, DCR required that the residual flows go back into the country and that they cannot be securitized or pledged by way of a similar subordinated transaction. DCR also required that future issuances of this type be subject to a confirmation of the then current rating.

* Difficulty of Replacing Correspondent Banks. Garanti would most likely encounter difficulties in response to any attempt by the Turkish Government to redirect the TPR flows by replacing existing correspondent banks. This transaction involves agreements from all of

Garanti's TPR processing correspondent banks to irrevocably transfer the TPR collections to the trust collateral account. Alternative correspondent banks not involved in the transaction but capable of providing such a service would be limited. In addition, although these other banks may have the technical capabilities to provide this type of service, they may not have sufficient credit lines to accommodate large volume increases (documentary credits often require credit lines to process the collections). Thus, it is likely that only a portion of flows might be successfully redirected due to the limited number of capable banks. Further, because of their reputations, large money center banks may be unwilling to participate in a redirection attempt that would negatively affect a capital markets transaction.

SH Company News

TEXT

On Monday, APN announced that it will take stakes in two e-commerce companies, namely:

* iTouch Australia, a new joint venture between APN and In Touch South Africa (APN: 35% interest). This joint venture will mirror the venture between InTouch and Independent News in South Africa.

Australian operations: iTouch will be focused on the market for short message systems (SMS), providing mobile telephone users with subscriptions to SMS alerts such as sports and weather updates. It has had no operations in Australia until now.

EKD 10/03/2003

STN

In Touch's International operations: InTouch has a variety of alert products that it is rolling out through Australia, NZ, Ireland, England and Israel.

* Soprano Designs (25% interest). Soprano is seen as a complementary investment to iTouch.

Operations: Soprano is a WAP software developer and has already secured development contracts with several Australian telecommunications companies. The company's software enables standard mobile telephones (GSM or CDMA) to become a virtual Automatic Teller Machines **allowing** for **transactions** such as bill payments. The operation has been in existence for five years and is profitable.

Both companies are potential float candidates over the next couple of years.

Cost to APN?

* iTouch-40% of the investment will be in cash with the other 60% in contra-advertising.

* Soprano is entirely a cash investment.

We estimate that the cash outlay for both of these investments is about \$5m. Completion is expected in November. The accounting treatment of the investments has not been **determined** (ie. equity accounting or investment).

The PeakHour deal was structured such that APN injected a **small amount** of equity (less than \$2m) and negotiated contra-advertising arrangements.

Overall, APN's increased outlay for APN Digital's investments is expected to have a minimal impact on FY2000 net profit.

Further investments: We understand that APN Digital has **identified** five areas of opportunity in e-commerce with the current investments spanning two of these, namely the business-to-business market and wireless. Therefore, investments in at least three other companies are on the cards. However, APN has noted that it has no intention of moulding APN Digital into a "venture capital" operation.

Conclusion: The focus of the two new e-commerce investments is clearly on mobile data, as distinct from the Internet. We believe that mobile data is a growth area, especially in light of Australians penchant for mobile phones and technology. Therefore, we view APN's investments positively.

SH ANALYST INTERVIEW: E-COMMERCE SOFTWARE & SERVICES

TEXT

ANALYST INTERVIEW: E-COMMERCE SOFTWARE & SERVICES (CONT)

We're hearing that companies like Compaq (CPQ) are already building in smart card readers, and as you may know, American Express is doing a very broad-based issuance of smart cards (I think it's called the Blue Card) to consumers. Most banks have been tied up in pilots and closed system implementations. American Express is the first one going to a broad-based rollout of smart cards in this country.

TWST: Given that there's almost zero use of that paradigm currently, when do you think it's going to start reaching critical mass?

Mr. Carpenter: That's been a very difficult point in the rollout to try to **identify**, so I will tell you I don't know. But it would seem fairly

logical that the security concerns, the rising degree of fraud and credit card disputes occurring on the Web will eventually lead to adoption of a more secure way of handling payments. As you may know, the Internet accounts for 2% of consumer purchases, but it accounts for 50% of disputed transactions and fraudulent transactions.

TWST: That's interesting. What will that mean for existing technologies ' **CyberCash** and existing software-based paradigms?

Mr. Carpenter: Again, it's evolving at a measured pace. There is a very substantial legacy infrastructure involving proprietary software and telecommunications protocols and networks. So initially just the front end is being automated, the link between the consumer and the Web merchant. Now, there are companies like **CyberCash** (CYCH) that act as a

bridge between a proprietary network run by, say, a First Data Corporation and a Web site. They act as a firewall between the legacy network run by First Data and the public Internet. They also handle the decryption of document information. There may well be a cluster of these intermediaries that help run some of the software that enables e-payments. And there are also core software suppliers that are acting as arms merchants enabling the merchant bank, the issuing bank, the card

STN

association, the Internet service providers and Web merchants and consumers to use more sophisticated encryption tools.

TWST: Tell me about some of the companies you cover in this area, and particularly maybe focus on some of the companies you have strong buys on and are particularly excited about.

Mr. Carpenter: One company is NOVA Corporation, which I'm excited about. They are a classic credit card transaction processing services company. They have about 8% share of the U.S. market, and they will process \$54 billion in credit card charges this year. They are using the WorldCom Network, which is an all-Internet protocol network, and they have introduced a security software product called NOVA Transport, which they give for free to the merchants to enable those merchants to send credit card **authorization** and the information about the

transactions

back to NOVA over the public Internet.

SH Item 8: Authorize Issuance Of Bonds

TEXT

Item 8: Authorize Issuance of Bonds

This item requests shareholder approval for one or several bond issuances totaling up to PLN 1 billion (\$243.6 million) in nominal value. According to the bank's shareholder circular, the bonds will be in bearer form, denominated in either Polish Zloty, euros, or U.S. dollars and will have terms of anywhere between two and seven years. All other terms of the bonds, including type, price, specific terms, coupons, and conditions of purchase, will be **determined** at the time of each issue by the BIG Bank Management Board.

Attempts to contact a representative of the bank to discuss the undisclosed terms of this bond issue were unsuccessful. Nonetheless, ISS cannot recommend shareholder approval of new debt securities without more information that BIG Bank Gdanski is providing its shareholders here. Given the **small amount** of details the bank has seen

fit to disclose, shareholders cannot even be certain that these securities will not be in the form of convertible bonds that may convert into a number of ordinary shares of the bank upon maturity.

EKD 10/03/2003

STN

Given the lack of disclosure of the terms of the bonds, and given the open-ended nature of this authorization, we recommend that shareholders vote against this proposal.

SH First Quarter 1999 Results

TEXT

First Quarter 1999 Results

On May 11, HPK reported stronger-than-expected results. Revenue at Boomtown advanced by 10.9% to \$57.7 million, while revenue at the Hollywood Park properties increased by 4.1% to \$26.9 million due to a 6% increase at the Hollywood Park Casino. In addition, 1Q99 represented the first full quarter results from the Casino Magic properties (acquired on October 15) which posted stronger results than in 1Q98, with CMAG Biloxi and Bossier posting 22% and 51% revenue increases, respectively.

EBITDA of \$35.9 million was \$5 million greater than our expectations due to a strong performance at the CMAG properties (+\$6.0 million), offset by slightly higher corporate expense, some of which was attributable to the negotiations to sell the Hollywood Park Race Track.

SH Sale Of Hollywood Park Race Track

TEXT

Sale of Hollywood Park Race Track

On May 6, HPK announced that it had reached a definitive agreement with Churchill Downs (CHDN) to sell the Hollywood Park Race Track and 237 out of a total of 378 acres, as well as for the sale/leaseback of the Hollywood Park Casino at an annual cost of \$3 million to HPK. The \$140 million sale price is expected to generate approximately \$115 million in net proceeds to HPK. Further, after receiving the necessary gaming and racing regulatory **approvals**, the **transaction** should close by the beginning of 4Q99. At the present time, the funds generated from the sale are expected to be used for the construction of the Indiana casino and general corporate purposes. While the company anticipates calling the CMAG 13% bonds on August 15, 2000, using the sale proceeds for this purpose, we find it hard to believe that HPK would simply hold excess cash for over one year. Instead, we would suggest that HPK utilize the funds to make opportunistic acquisitions of non-Las Vegas, non-Atlantic City gaming properties.

The race track generates approximately \$14 million in EBITDA annually, while the casino generates approximately \$ 6 million. After the sale of the casino, HPK expects to sublease it to another operator since it will be unable to run the casino due to the sale of the race track. We are assuming that HPK could receive up to \$6 million in lease payments annually, of which \$3 million would be earmarked for payment to CHDN. Due to the vagaries of sale/leaseback accounting, the \$3 million payment would be apportioned to interest expense, payment of a lease obligation and depreciation; however, until the final sale price allocation is **determined**, these items are not yet known. In addition,

a

small amount of direct expenses are expected to be incurred

STN

as well.

Factoring in the preceding information, the net financial statement impact is expected to be non-material.

SH Industry And Company Background

TEXT

* Focused measurement of customer profitability and potential customer value allows marketers to understand how to best allocate marketing dollars across customers and customer segments -- leading to an increase in direct marketing ROI and higher revenue and profitability.

Enterprise Marketing Automation -- Market Segmentation

We believe that EMA is a large and high-growth market opportunity that will produce several best-of-breed "winners," even after larger vendors from the CIS and ERP markets begin to enter the market. While EMA is a broad term used to describe the automation of marketing functions, there are several distinct market segments that are emerging.

HIGH-END CAMPAIGN MANAGEMENT. This is where Exchange Applications is the current market leader, and in the high-end campaign management market segment companies typically are in a business-to-consumer environment and direct marketing is a primary engine to revenue growth (e.g., financial services, telecommunications). Companies utilizing high-end campaign management systems typically have prospects/customers that number in the hundreds of thousands to millions and, as a result, have data warehouses with a capacity that often exceeds a terabyte. The ability to integrate into an existing data warehouse infrastructure is a key to success (e.g., data mining tools, data loading, extracting, transformation, OLAP reporting tools). Out of the 4 leading hardware vendors META Group cited as being focused on the business to consumer

STN

data warehousing market, **Exchange Applications** has reseller

agreements

with two (IBM, NCR) and comarketing agreements with the other 2 (Compaq, Sequent). In addition to being a large new market opportunity, there is also a large replacement market opportunity as companies shift their spending from proprietary, service bureau-based offerings to newer, open systems EMA solutions.

ANALYTICAL APPLICATIONS. Analytical applications use at their core a data mart for slicing and dicing information, which in this case is information related to sales and marketing, customer profitability, etc. We believe that over the next 1-2 years Exchange Applications will increase its presence in the analytical applications segment by leveraging its domain expertise in successful marketing processes to build applications that help customers **determine** how marketing resources should be invested (e.g., which customers, what marketing messages). The Company currently delivers these capabilities to customers on a custom basis, but we expect the Company to begin packaging more of this functionality out of the box. An important aspect to being successful in this market segment is that data from many different systems must be accessed (e.g., CIS applications from Siebel or Clarify, ERP applications from SAP or Oracle, legacy systems). Moreover, getting to data from all of these disparate sources must be made simple and cost effective. A hot, but still small, private company focused on this market segment is Epiphany. Siebel Systems has a data mart application called the Siebel Marketing Enterprise; however, right now it is primarily focused on slicing and dicing only Siebel Sales and Service data (a **small amount** of available customer information). SAP has released a business intelligence warehouse to make it easier for customers to access information stored in SAP databases; however, once again this is only one source of information that would go into an analytical application. Hyperion Solutions is the largest analytical applications vendor in the world and it is likely that they will make a move into the marketing space over the next 1-2 years.

INVESTMENT UPDATE

Like the motor car creeping forward before the green light is given, **Cybercash** shares look like they want to lunge ahead, driven in no small part by the current Internet stock euphoria. Although we remain optimistic about its ability to drive change in the Internet payments industry as well as generate positive earnings, we still believe that this is the first inning in a nine-inning ball game.

Some of the near term challenges, in our opinion, include: (1) developing sustainable acceleration in its core payment transaction volume, (2) warding off competitors who have struck pay dirt in **Cybercash's** sand box by offering low cost, no-frills-attached services to potential as well as existing **Cybercash** customers, and (3) demonstrating that its new initiative, Insta-Buy, can deliver tangible earnings. We believe it is earnings that ultimately matter and **Cybercash** is still proving how and where its earnings are derived.

We recently met with the **Cybercash** management team and were impressed by the potential for its Insta-Buy Wallet, a new product initiative.

First, some basic points about the wallet.

What it does?

1. Provides immediacy of Internet payment transactions, a throwback to the old merchant days when a customer was known, and the merchant simply tallied the amount on his books with settlement made at a later date. Simple and easy.

2. Puts **Cybercash** at the center of the merchant/consumer nexus. In the old merchant example, think of it as a third-party representative that tallies all the transactions on each other's behalf

3. Provides third-party intermediaries the opportunity to create branding as a "shadow representative" of **Cybercash**. First USA, a large credit card issuer, was first to deploy the Insta-Buy service.

How it works?

Cybercash licenses its Insta-Buy technology to a third party, principally a bank or potentially a portal. It, in turn, offers it to its customer who can then use it at any Insta-Buy merchant. When the customer goes to a merchant that accepts the Insta-Buy payment, all he/she needs do is **identify** themselves and the service is engaged. Unlike a registration and polling payment application, which occurs at most Internet sites today (meaning you need to complete pertinent details of who you are, then indicate payment method and provide **authorizing** data with each **transaction**), Insta-Buy is an automatic registration

STN

service

simplifying the process. Once identified, your Internet wallet is opened for you by Cybercash or the Cybercash shadow representative. If

there are any distinctions between this and the wallets that we have recently heard about from the search engines (Yahoo! and Excite),

Cybercash is a three party many to many, whereas the search engines are two party many to one.

TEXT

3. More significant acquisitions will be sought to drive forward the long-term growth businesses.

Performance businesses achieve good results, but have limited growth prospects

In addition to the long-term growth businesses, Delta has identified several performance businesses which achieve excellent performances in their specific products and markets, but whose future growth potential is limited by the size of the markets in which they operate. Investment in these performance businesses will continue, but given their limited growth potential, their use of cash resources should be broadly neutral after contributing to group tax and dividend commitments.

The remaining operations have been included in programmes of operational improvement and divestment so that Delta can generate more resources for investment in the long-term growth businesses.

A perusal of events during 1998 shows that Delta has not been slow to implement its new strategy:

TT A Perusal Of Events During 1998

EKD 10/03/2003

STN

TEXT

Date	Description
January	Acquisition of controlling stake in Acrotec, a manufacturer of parts for gas ranges. Delta raised its interest from 25% to 66% at a cost of approximately US\$6.6m. Acrotec is based in Mexico. It complements Sourdillon, whose headquarters are in France with additional manufacturing facilities in the USA.
January	Acquisition of controlling stake in Delta Electrical Industries (DEI) and DEI acquires BHP's AMCL plant. DEI acquired Broken Hill's Australian electrolytic manganese dioxide business, AMCL. Consideration approximately A\$57m representing net asset value. Delta's stake in DEI was increased from 47.5% to 50.1% via a vendor placing at a cost in the region of (L)5.8m.
February	Two-part disposal and asset exchange agreement with BICC. Part 1 saw Delta sell its rod and winding wire operations to BICC for (L)17.8m. Part 2 was an exchange of operations and assets under which Delta transferred its utility cables, utility accessories and rubber cables businesses to BICC. In return, BICC transferred its building wire operation to Delta, with a small cash payment to compensate for the difference in the value of the assets in the transaction. The BICC business has been relocated by Delta to its existing operations at Llanelli and Derby.
March	Acquisition of Holec Holland, an electrical switchgear manufacturer, for total consideration of (L)105m. Headquartered in the Netherlands, Holec has additional assembly operations in Denmark and Australia. In 1997, Holec made an operating profit of around (L)10.4m on sales of over (L)104m.
April	Disposal of Smiths Metal Centres. Management buyout. Consideration (L)9.6m. Smiths stocks and distributes a wide range of non-ferrous metals and stainless steel products.
July	Acquisition of Schubert & Salzer Ingolstadt-Armaturen, a German manufacturer of sanitary control valves. Consideration around (L)6m.
July	Management changes. Guido Declercq, President of Holec, appointed Divisional Managing Director of Circuit Protection. Manfred Halper appointed Divisional Managing Director of Plumbing Products. Manfred Halper joined from Schlumberger Group.
August	Industrial Galvanisers to build a new structural galvanising plant in the Philippines. Investment will amount to (L)6m. Production expected to commence at the end of 1999.
October	Industrial Galvanisers to build greenfield hot-dip galvanising plant near Miami, Florida. Investment will amount to around (L)4m. Delta is also to manufacture and market galvanised steel lintels under the Ingal product range at its Tampa plant.
November	Disposal of Delta Fasteners Pty, a distributor of industrial fasteners based in Australia. Consideration (L)8.9m. Net assets approximately (L)3.3m.
November	Disposal of Materials businesses for a total consideration of around (L)27m. The four businesses sold were Delta Extruded Metal Company, Delta Manganese Bronze, Delta Precision and

Revenue by geography shifted toward the US due to stronger sales from the smart card area. Breakdown by geography was US 48 %, Europe 25 % and Asia 27 %. The heavy portion from Asia resulted in part from the newly acquired companies Intermart and ICS and shows their strength in the region. Europe dropped due to a decline in DVB sales. Europe typically suffers in Q3 due to the summer vacation schedule, however, regulatory uncertainty in Germany also contributed to the decline. Q3 ended with record orders for DVB in Europe.

Operating costs were one percentage point below our expectations and five percentage point below the first two quarters. The nominal resulted primarily from an increase in good will from acquisitions, otherwise would have been the same as last quarter. Interest and other income increased strongly because the proceeds from the secondary offering were invested for the full quarter, only small
amount from
currency gains (\$100,000). The company created a year end tax buffer made raising tax position slightly (27 %).

EKD 10/03/2003

STN

SCM boasted the following key developments in Q3:

SC Microelectronics has signed a memorandum of understanding to include SCM's common interface chip and software solution in their new set top box chip reference design. SC Microelectronics currently has a market share of 50 % in the set top box market for the chip set. SCM's chip provides the needed software and signals to the connector for the plug in modules.

Philips Cryptoworks supplying conditional access at Philips placed their first order for SCM's digital video broadcasting - conditional access modules in Q3. Philips Consumer Division, the leading set top box supplier in Europe, agreed to the concept of plug in security module security and has embedded SCM's common interface chip and software in their new set top box. Shipment are set for forth quarter 1998.

An international consortium of banks including BankAmerica, Citigroup, Chase Manhattan, Bankers Trust, Barclays, ABN Amro, Deutsche Bank and Hypo & Vereinsbank will use smart cards to identify and certify **authorized** users for secure electronic commerce
transactions

with corporate clients. The number of bank corporate customers expected to join the program is five million. We do not expect this project to be fully on the ground until the year 2000, however development projects will begin immediately. SCM supplied directly or indirectly to these efforts in the third quarter, 1998.

Mindport Irdeto Access of the Netherlands, one of the largest conditional access software providers in Europe, will partake in a joint venture with SCM for the development of a DVB-CI conditional access module. The DVB-CI module will support the security application of Irdeto and be manufactured by SCM. Irdeto provides conditional access systems for Italy, Greece and the Middle East.

EKD 10/03/2003

STN

TEXT

Revenue by geography shifted toward the US due to stronger sales from the smart card area. Breakdown by geography was US 48 %, Europe 25 % and Asia 27 %. The heavy portion from Asia resulted in part from the newly acquired companies Intermart and ICS and shows SCM's strength in the region. Europe dropped due to a decline in DVB sales. Europe typically suffers in Q3 due to the summer vacation schedule, however, regulatory uncertainty in Germany also contributed to the decline. Q3 ended with record orders for DVB in Europe.

Operating costs were one percentage point below our expectations and five percentage points below the first two quarters. The nominal growth resulted primarily from an increase in goodwill from acquisitions, otherwise operating costs would have been the same as last quarter. Interest and other income increased strongly because the proceeds from the secondary offering were invested for the full quarter, only **small amount** from currency gains (\$100,000). The company created a year end tax buffer raising tax position slightly (27 %) from the average 25 %..

SCM boasted the following key developments in Q3:

SC Microelectronics has signed a memorandum of understanding to include SCM's common interface chip and software solution in their new set top box chip reference design. SC Microelectronics currently has a market share of 50 % in the set top box market for the chip set. SCM's chip provides the needed software and signals to the connector for the plug in modules.

Philips Cryptoworks supplying conditional access at Philips placed their first order for SCM's digital video broadcasting - conditional access modules in Q3. Philips Consumer Division, the leading set top box supplier in Europe, agreed to the concept of plug in security module security and has embedded SCM's common interface chip and software in their new set top box. Shipment are set for forth quarter 1998.

An international consortium of banks including BankAmerica, Citigroup, Chase Manhattan, Bankers Trust, Barclays, ABN Amro, Deutsche Bank and Hypo & Vereinsbank will use smart cards to **identify** and certify **authorized** users for secure electronic commerce *****transactions*****

with corporate clients. The number of bank corporate customers expected to join the program is five million. We do not expect this project to get rolling until the year 2000, however development projects will begin immediately. SCM supplied directly or indirectly to these efforts in the third quarter, 1998.

Mindport Irdeto Access of the Netherlands, one of the largest conditional access software providers in Europe, will partake in a joint venture with SCM for the development of a DVB-CI conditional access module. The DVB-CI module will support the security application of Irdeto and be manufactured by SCM. Irdeto provides conditional access systems for Italy, Greece and the Middle East.

SH Business Description

TEXT

Business Description: With total assets of FF 2,035 billion (about US\$340 billion) as of year-end 1997, Banque Nationale de Paris (BNP) is the third largest bank in France and is one of the main retail and corporate domestic banking groups. It maintains an extensive retail network in France of over 2,000 branches and some 700 offices in 79 different countries.

BNP's strategy and organization were redefined in 1993, at the time of its privatization. Since then, BNP has continued to focus on profitability and cost containment. BNP has **identified** two main areas of growth: retail banking in France and international banking for large corporate and private clients. The new organization is split into two divisions, domestic banking and international banking & finance, which should allow BNP to better leverage its corporate and private banking divisions on a worldwide scale.

On the domestic retail banking side, BNP has modernized and improved the quality of its customer services while cutting costs. To improve its efficiency, BNP is developing value-added products and new services. The bank is also actively looking for alternative and innovative distribution channels such as telephone banking or computer home banking. BNP has launched new products and set up specialized branches to better respond to its clientele needs. The use of technology is part of BNP's goal to lower its cost structure.

BNP's international marketing strategy encompasses several principal lines of businesses, including international trade finance, structured finance, asset management, private banking, equities and equity derivatives, interest rate, money market, and foreign exchange. The international division focuses on five categories of customers (multinational corporations, international private banking clients, institutional investors, individuals from retail banking operations and correspondent banks).

BNP is backed by an alliance with Dresdner Bank. BNP's alliance with the second-largest bank in Germany, tends to combine forces in specific markets abroad, primarily Eastern Europe, through the opening

STN

of joint international corporate banking units. Both banks save themselves the time and expense of building up extensive networks. They jointly own the United Overseas Bank in Geneva, Switzerland, as well as seven joint-ventures in Turkey, Eastern Europe, Chile and Russia. The two banks have developed electronic links that allow cross-border

transactions for small amounts. Dresdner is listed among BNP's core shareholders; the current cross share-holding is less than 1%.

In the domestic market, BNP has an alliance with AXA -the largest insurance company in Europe- to distribute basic insurance products (property and casualty insurance) marketed by a joint subsidiary. AXA has also started to recommend BNP's products to its clients. In the past, BNP and AXA had a cross-shareholding strategy that was recently eased. From a 20% stake in 1990, BNP's ownership interest was reduced to 7.22% while AXA/UAP only had a 9.7% in BNP as of year-end 1997.

At week's end, a number of members in Congress commented that they would oppose the proposed user fees for FDA as well as for USDA. There is certain to be much more on the topic of user fees in weeks to come.

Honey Roast Cashews Recalled

The possible presence of peanuts in the Planters Co.'s Honey Roasted Cashews prompted the East Hanover, NJ-based company to recall 2-oz. bags. The products involved in this recall were distributed in the Eastern and Southern United States, as well as in Northern California and Hawaii.

Among the food product recalls cited in the Feb. 26 issue of FDA Enforcement Report were:

POWERaDe Lemon-Lime Thirst Quencher in 20-oz. containers, a product of The Minute Maid Co., Waco, TX distributed in Arizona, California, Hawaii, New Mexico, Nevada, Oklahoma, and Texas, as well as

EKD 10/03/2003

STN

Guam. The ongoing recall of 8,411 cases (24 bottles per case) was initiated by Coca-Cola Co., Atlanta, GA -- the products covered by this action may be identified by the code Lot#6346WT. Reason for the recall:

"Product contains undeclared FD&C Yellow No. 5. Some bottles containing Lemon-Lime flavor are labeled as Mountain Blast flavor, which does not list FD&C Yellow No. 5 as an ingredient."

Welch's White Grape Classics Juices (three varieties -- White Grape Peach, White Grape Raspberry, and White Grape Cranberry), manufactured by Welch's, North East, PA with distribution throughout the United States and Puerto Rico. The ongoing recall of 150,225 cases was initiated by Welch's, Westfield, NY. For specific information as to the codes of products involved in the recall, please contact THE FOOD INSTITUTE. Reason for the recall: "Products are contaminated with mold."

Minute Maid Fruit Punch in 64- and 128-oz. packages and Minute Maid Grape Punch in 64-oz. packages, products of The Minute Maid Co., Paw Paw, MI distributed in the Midwest. The ongoing recall of Fruit Punch (3,141 cases of 64-oz. packages and 4,766 cases of 128-oz. packages) and Grape Punch (1,512 case of 64-oz. containers) was initiated by The Minute Maid Co., Houston, TX.

For specific information as to the codes of products involved in the recall, please contact THE FOOD INSTITUTE. Reason for the recall: "Products are contaminated with a small amount of acid sanitizer."

COMPANY PROFILE

With total assets of FF 1,594 billion (about US\$ 325 billion) as of year-end 1995, Banque Nationale de Paris (BNP) is the fourth-largest bank in France and is one of the main retail and corporate domestic banking groups. It maintains an extensive retail network in France of over 2,000 branches and some 500 branches overseas in 76 different countries.

BNP's strategy and organization were redefined in 1993, at the time of its privatization. BNP has **identified** two main areas of growth:

retail banking in France and international banking for large corporate and private clients. Its decision to separate its international banking activities from its domestic businesses should help the bank to better capitalize on its international network to expand operations and to better compete with U.S. and UK banks active internationally and to better structure its corporate and private banking divisions on a worldwide scale.

On the domestic retail banking side, BNP has modernized and improved the quality of its customer services while cutting costs. The bank is also actively looking for alternative and innovative distribution channels. BNP's international marketing strategy encompasses 6 principal lines of businesses (conventional bank lending, specialized finance, capital markets, international private banking, payment systems management, and asset management) and focuses on four categories of customers (multinational corporations, international private banking clients, institutional investors and correspondent banks). In order to boost profitability, the bank reorganized its different businesses into profit centers last year, each of which has its own budget and manager.

BNP is backed by two strong alliances: UAP and Dresdner Bank. BNP's alliance with Dresdner Bank, the second-largest bank in Germany, tends to combine forces in specific markets abroad, primarily Eastern Europe and the Far East, through the opening of joint international corporate banking units. Both banks save themselves the time and expense of building up extensive networks. They jointly own the United Overseas Bank in Geneva, Switzerland, as well as six joint-ventures in Turkey, Eastern Europe, Chile and Russia. The two banks have developed electronic links that **allow cross-border transactions** for

small

amounts, and they are also working on common electronic banking products. Dresdner is listed among BNP's core shareholders; the current cross shareholding is about 1%. In the domestic market, BNP has an alliance with Union des Assurances de Paris (UAP), the largest insurance company in France, to distribute basic insurance products (primarily property and casualty insurance), developed by a joint subsidiary with UAP through BNP's banking network. UAP has also started to recommend BNP's products to its clients. BNP maintains a 17.66% stake in UAP, which is carried on its balance sheet under the equity method. UAP, in turn, has a 14.14% stake in BNP.

BACK-TO-BACK ANNOUNCEMENTS

Gtech Contract For Unattended, Self-service Terminals

On 3/5/97, TransAct announced a new 2-year contract with GTECH to provide printers for GTECH's new EZ Express self-service terminals for keno and lottery games. GTECH is installing these terminals in retail environments such as superstores and certain public places on a trial basis in limited markets throughout the United States. If the trials are successful and the program is expanded, sales of printers to GTECH for the EZ Express terminals could represent a new stream of sales in the lottery and gaming markets for TransAct in 1998 and beyond. We have opted to take a wait-and-see attitude regarding the potential of this contract. Some states may object to unattended lottery terminals because of the potential use by minors. Thus, we have elected not to reflect any sales contribution from this contract in our income statement model for TransAct until GTECH **determines** the success of its pilot trials.

Ontario Lottery Corporation Contract For In-Lane Lottery Terminals

On 3/6/97, TransAct announced a second new contract in the gaming and lottery market to supply printers for a new on-line lottery application with Ontario Lottery Corporation. The Ontario Lottery Express Play system is expected to facilitate the purchase of lottery tickets by enabling consumers to buy "quick-pick" lottery tickets generated by printers located at supermarket checkout lanes. Ontario Lottery is conducting pilot trials to **determine** if the new systems expand the size of the market or cannibalize sales of tickets sold at traditional attended terminals. If Ontario Lottery decides to proceed with the system, it could result in \$3.5-7 million in sales to TransAct over a 2-year period. Ontario Lottery could make a decision regarding the program within 3 months. Until a decision is made, there is no change to our EPS estimates.

Okidata sales And Marketing Agreement For Latin America

STN

On 3/7/97, TransAct followed up with another significant announcement. It entered into an exclusive 5-year sales and marketing agreement with Okidata to sell TransAct's POS printers in the Central

American, South American and Caribbean regions. TransAct plans to hire a Latin American sales manager and will begin introducing its products to the Okidata sales force at an Okidata Latin America sales meeting in April. Due to the amount of training and long sales cycle (3-6 months), we expect this new agreement to add less than \$3 million to TransAct sales in 1997. Because of the small amount, we are leaving

our sales and earnings outlook unchanged for 1997. Any impact to sales and earnings in 1997 would likely benefit third or fourth quarter earnings the most. The upside potential from this agreement comes in 1998 and into 1999.

SH Deal No. 1: Distribution Pact In Poland

TEXT

Deal No. 1: Distribution Pact in Poland

The first deal involves the company's agreement to acquire 30% of the shares of Novita Market S.A., a Poland-based wholesale and retail distributor. The remaining 70% will be owned by the parent, Novita S.A., the largest carpet manufacturer in Poland. In our view, the significance of this deal is that it allows Armstrong to lock in a secure distribution pipeline in Poland, either for flooring products currently manufactured at its Teeside, England, facility or its new Serbian facility (see below) or for products manufactured at sites yet to be determined. The company had been supplying a small ***amount*** of product through Novita, but we believe this agreement allows for a significant expansion in volume over the next couple of years.

SH Deal No. 2: Manufacturing Presence In Serbia

EKD 10/03/2003

STN

TEXT

Deal No. 2: Manufacturing Presence in Serbia

The second deal announced was a letter of intent to form a joint venture with Serbian residential vinyl sheet flooring manufacturer Sintelon. This transaction gives Armstrong its second source of vinyl flooring product in Europe; the other, as mentioned earlier, is its Teeside, England, plant. While the company has already been serving Eastern Europe and Russia from Teeside, the agreement with Sintelon should allow Armstrong to significantly expand its presence at a much lower cost.

The plant is old, but after a period of being mothballed, it is now running with brand-new German production equipment. In addition to obvious transportation advantages over the Teeside plant in serving Eastern Europe/Russia, Sintelon's production line manufactures three-meter-wide product, the preferred product in Russia (vinyl flooring itself is a preferred flooring product of Russian consumers). Teeside normally produces four-meter-wide flooring, so retooling the line to produce product for Russia was difficult and costly. From a capacity standpoint, the plant is roughly equivalent to Teeside, which we believe does about \$100 million in annual sales volume.

We believe the Serbian plant, which is in northern Serbia near the Italian border, was chosen due to its availability, its location in relation to the fast-growing Eastern European/Russian market, and its modern low-cost equipment -- management believes Sintelon's Serbian plant is one of the lowest-cost vinyl flooring plants in the world.

Although yet to be finalized, Armstrong World's capital risk is expected to be negligible and its ownership in the joint venture meaningful. In exchange for its stake in the joint venture, Armstrong World will bring its brand-name recognition, production and marketing know-how, distribution capabilities (Novita, for example), and working capital.

Beyond the benefits of the initial joint-venture agreement, Armstrong's agreement with Sintelon is expected to give it an option to invest in other Russian manufacturing and distribution companies in which Sintelon is the majority shareholder. In particular, Sintelon holds a large stake in a mothballed Russian vinyl flooring plant.

SH Item 5: Terminate Poison Pill

TEXT

BC Sugar's other large shareholder, GPI, a company controlled by Jim Pattison, should also be considered with respect to this last point. Mr. Pattison has made no secret of his intention to vote to terminate the rights plan. GPI's 20-percent stake combined with the Balaclava stake currently represent almost 40 percent of the voting share capital. Together, these parties could conceivably carry this resolution with a relatively small amount of institutional support, either at this year's annual meeting or at next year's, when the rights plan is due to be reconfirmed. Mr. Pattison initiated his investment in the company in late 1994, and speculation from market analysts as to whether he would make a bid for the company has continued since. In addition, Mr. Pattison has been mentioned in the press for having previously used creeping acquisitions to expand his business empire, including interests in GPI and Westar Group Ltd.

In that regard, BC Sugar's situation is reminiscent of the situation at Southam Inc. in 1995 and 1996. At Southam's 1995 annual meeting, the board asked shareholders to reconfirm its original rights plan, as adopted in 1990. The company's two largest shareholders, Hollinger and Power Corp., which together controlled approximately 40 percent of the company's shares, notified the board that they intended to vote against the continuation of the plan, which was defeated at the annual meeting. At the time, there was speculation that these two parties wanted to increase their stakes in the company. On May 24, 1996, Hollinger Inc. increased its stake in Southam from 19.5 percent to 41 percent by purchasing the 20.5-percent stake owned by Power and announced plans to acquire the rest of the company. Hollinger President David Radler and Chairman and CEO Conrad Black said the company would bring its ownership stake to 50 percent through private purchases and then make a general offer to all of Southam's shareholders in an attempt to take the company private. Hollinger said it won't pay more than \$18 (\$13) per share for the remainder of Southam, which represented only a nine-percent premium to Southam's then-current trading price, but subsequently increased the price when it became apparent that shareholders were not impressed. In July 1996, Hollinger successfully obtained shareholder approval to replace five independent directors at Southam amid concerns about share price performance and board infighting. In the end, Hollinger gained control of the board and then consolidated its control of the company through a tender offer to increase its ownership to 50.7 percent.

Unlike Southam's board and management, BC Sugar has not been the subject of similar criticism. Nonetheless, we must question Balaclava's (and GPI's) ultimate intentions. In supporting this resolution, shareholders could easily bring about the removal of the company's rights plan, following which Balaclava and GPI could increase their

STN

investments in the company. Whether or not this would be to the benefit of or detrimental to all shareholders cannot be **determined** due to the lack of information regarding the intentions of these shareholders. Given this lack of information and in light of the potential consequences for BC Sugar's remaining public shareholders, we believe it would be premature to support Balaclava's request. This is especially true since the company will need to obtain shareholder approval for the continuation of the plan next year.

We recognize that many institutional investors do not support the adoption or continuation of rights plans in general. While we believe that a properly structured rights plan can be used effectively, it can also greatly alter the balance of power between shareholders and management if misused. Rights plans may also discourage transactions that would otherwise serve to maximize shareholder value. Likewise these plans might discourage **transactions** that **allow** a shareholder or group of shareholders to gain control of a company at the expense of other shareholders. We believe this case is unique for a variety of reasons including the structure of the plan, the lack of misuse of the plan by the company, and the unclear consequences for shareholders should the plan be removed in this manner.

We recommend a vote AGAINST this proposal.

SH Keeping Electronic Commerce Secure

TEXT

The current electronic payment process is being streamlined to ease the purchasing process

Secure electronic commerce is still a relative rarity. Some merchants **allow** unsecured credit card **transactions**, but currently most transactions need to be concluded with a phone call or a fax, with the Web site serving only as an electronic version of the paper catalog (see Chart 48). Current payment methods that do exist are difficult and repetitive. A consistent, easy to use payment method is required to facilitate the process. Various consortiums of industry players are

EKD 10/03/2003

STN

getting together to solve these "standards" problems in order to facilitate the acceptance and implementation of electronic commerce sites. People are already accustomed to using credit cards remotely through the phone as well as mail order. Just as there are multiple payment technologies in the real world (cash, credit card, debit cards, etc.), electronic commerce payments will carry this same diversity. Credit card processors will be the first to market with mass consumer electronic commerce payment solutions..

The Secure Electronic Transaction (SET) specification to protect the credit card issuers

VISA and MasterCard have recently announced the Secure Electronic Transaction (SET) specification so that credit card transactions can be conducted safely across the Internet. SET is designed primarily to protect the credit card companies from fraud, not the consumer, who will bear no liability beyond the \$50 limit of physical credit card transactions. Under SET merchant and consumer can deal directly with one another; credit card numbers, payment information, and

identification information can be securely sealed and delivered. SET uses the public key encryption method licensed from RSA Data Security. In addition, SET also uses digital certificates so that card holders can be identified and verified. VISA has chosen VeriSign for its digital certificate implementation, while MasterCard has chosen GTE Government Systems Corporation and its CyberTrust system. While both VISA and MasterCard have endorsed these vendors for its SET implementations, neither will require member banks to use them. The SET standard was developed in conjunction with several other players with major interests in developing electronic commerce solutions such as Microsoft, IBM, GE, Netscape, CyberCash and others that have committed

to support the specification. Commercial implementations of the SET standard are expected to be in place at the end of the year.

TEXT

CyberCash: The **CyberCash** wallet software plugs into the consumer's browser and contains the buyers **identification** information, shipping address, and credit card information. Using **CyberCoin**, the user opens a debit account into which cash can be deposited. The user can then draw from this digital account to pay for goods and services electronically. The user's "wallet" interacts with the **CyberCash** merchant software to conduct the transaction and securely deliver the data. The data is not passed between the merchant and consumer, instead it is passed through conduit **CyberCash** as the trusted authority and delivered to the merchant's bank who handles the payment **transaction, approval** and delivery. Therefore, **transactions** can be delivered and *****approved***** in real-time, without the merchant having to receive nor store the sensitive data. The whole process takes less than 15 seconds from request to pay to final approval. **CyberCash** uses a combination of RSA public key and DES secret key encryption to provide secure data transmission. **CyberCash** makes its client and server software free, instead it charges transaction processing fees similar to traditional credit card transactions.

* **First Virtual:** The First Virtual Payment System approach does not rely upon data encryption, special software, nor does it pass secure data across the Internet. The sensitive information is securely stored in a location or trusted authority, and the consumer refers their payment information through an alias or PIN number. The original secure information registration happens off-line through mail or phone. Information transmission and delivery of payment is handled through e-mail and back office automation. First Virtual claims that over 2,000 merchants and 140,000 customers in more than 44 countries are currently using its system.

* **IBM:** IBM's Cryptolope technology provides a secure data "envelope" in which can be placed a variety of digital content such as text, sound, video, graphics and other sensitive data. In addition, the cryptolope can contain digital currency, credit card numbers, or other payment information. The Cryptolope can be transmitted securely and is unsealed with an electronic key that is used to open and purchase the item inside. Applications include IBM's infoMarket, which provides a variety of information sources and intellectual properties. America Online plans to implement Cryptolope technology to deliver software, hardware, and other proprietary digital content.

SH How To Pay For Goods Electronically

TEXT

Due to the transactions costs associated with credit card payments, credit cards are not suitable for **small payment**
amounts

Purchase of news feeds, newspapers, individual articles, pictures, online video games, or anything else that can be digitized and sold could fall into this payment category (see Chart 50). Depending upon encryption key lengths, the average server can sign 20 to 50 messages per second. Decryption is slightly faster. Average processing cost is \$0.01 to \$0.02 per transaction.

(Graphical Material Omitted - Call Boston (617) 345-2704, U.S. (800) 662-7878, U.K. (171) 815-3800 Or Canada (800) 544-5651 For Price And Availability: Chart 50 - **Micro Payments** Systems)

* **DigiCash: DigiCash's "e-cash"**
method uses encryption to generate
and transmit data packets that represent actual monetary value that can be passed from party to party as the digital equivalent of physical currency. The **e-cash** client software runs on the Windows, Macintosh and major UNIX platforms. The client allows users to connect to a bank, with which they have registered themselves, and download **e-cash** to their computer. **DigiCash** stresses security and privacy through using blind digital signatures and encrypted digital envelopes to prevent effective tracing of individual transactions to a given user. In a major trial of **e-cash**, over 60,000 users and over 100 merchants signed up to test the system last year, although this trial of **e-cash** did not represent actual monetary value. Mark Twain Bank of St. Louis Missouri has been offering applications for **e-cash** users since October 1995.

DigiCash employs RSA public key encryption.

INVESTMENT HIGHLIGHTS:

* Building upon its three existing business units, HFS announced the establishment of its fourth with the acquisition of Resort, Condominiums International (RCI). RCI controls a 70% share of the timeshare exchange business. This acquisition, which provides HFS with another source of high quality recurring revenues, is expected to close by year-end.

* As a result of the transaction, we have raised our 97 EPS estimate by \$0.20 to \$2.20. The company's core businesses continue to perform in-line to slightly above our expectations. We continue to recommend purchase of the stock and are targeting a mid \$90s price objective based on a 150% relative premium valuation to our 97 EPS

EKD 10/03/2003

STN

estimate.

SH Acquisition Of RCI

TEXT

ACQUISITION OF RCI:

HFS announced its agreement to purchase RCI, Inc. the leading timeshare exchange organization in the world. The company commands a 70% market share and experienced a mid-to-high teens CAGR over the last fifteen years. Terms of the transaction include \$550m cash, \$75m of HFS stock and an earn-out of up to \$200m over the next five years. RCI's balance sheet includes \$285m cash and equivalents, thus the up front cost for HFS is \$340m. RCI's financial performance will not be made public until after the deal is completed in late 4Q, but prior HFS acquisitions have been completed in the mid-single digit EBITDA multiple area and we would expect this transaction to coincide with that range.

SH Timeshare Exchange Business

TEXT

TIMESHARE EXCHANGE BUSINESS:

Timeshare buyers purchase ownership of a particular condominium-like unit for a specified week during the year. The most frequently cited decision criteria that consumers consider when purchasing a timeshare is the exchangeability with other weeks or even other properties. This **exchange preference allows** consumers to vary their vacation timetable or destination. RCI is the dominant exchange entity in both the domestic and international marketplace.

SH Company Profile

TEXT

COMPANY PROFILE

With total assets of FF 1,594 billion (about US\$ 325 billion) as of year-end 1995, Banque Nationale de Paris (BNP) is the fourth-largest bank in France and is one of the main retail and corporate domestic banking groups. It maintains an extensive retail network in France of over 2,000 branches and some 500 branches overseas in 76 different countries.

BNP's strategy and organization were redefined in 1993, at the time of its privatization. BNP has identified two main areas of growth:

retail banking in France and international banking for large corporate and private clients. Its decision to separate its international banking activities from its domestic businesses should help the bank to better capitalize on its international network to expand operations and to better compete with U.S. and UK banks active internationally and to better structure its corporate and private banking divisions on a worldwide scale.

On the domestic retail banking side, BNP has modernized and improved the quality of its customer services while cutting costs. The bank is also actively looking for alternative and innovative distribution channels. BNP's international marketing strategy encompasses 6 principal lines of businesses (conventional bank lending, specialized finance, capital markets, international private banking, payment systems management, and asset management) and focuses on four categories of customers (multinational corporations, international private banking clients, institutional investors and correspondent banks). In order to boost profitability, the bank reorganized its different businesses into profit centers last year, each of which has its own budget and manager.

BNP is backed by two strong alliances: UAP and Dresdner Bank. BNP's alliance with Dresdner Bank, the second-largest bank in Germany, tends to combine forces in specific markets abroad, primarily Eastern Europe and the Far East, through the opening of joint international corporate banking units. Both banks save themselves the time and expense of building up extensive networks. They jointly own the United Overseas Bank in Geneva, Switzerland, as well as six joint-ventures in Turkey, Eastern Europe, Chile and Russia. The two banks have developed electronic links that allow cross-border transactions for

small
amounts, and they are also working on common electronic banking products. Dresdner is listed among BNP's core shareholders; the current cross shareholding is about 1%. In the domestic market, BNP has an alliance with Union des Assurances de Paris (UAP), the largest insurance company in France, to distribute basic insurance products (primarily property and casualty insurance), developed by a joint subsidiary with UAP through BNP's banking network. UAP has also started to recommend BNP's products to its clients. BNP maintains a 17.66% stake in UAP, which is carried on its balance sheet under the equity method. UAP, in turn, has a 14.14% stake in BNP.

(*) from continuing operations

SH Investment Highlights

TEXT

INVESTMENT HIGHLIGHTS:

* Definitive Agreement Announced: SHN announced a "definitive agreement" to buy almost all the assets of TPIE, their largest franchisee. The transaction is subject to approval by shareholders and lenders of both companies and management expects closure on or before June 30.

* Increases Leverage From Turnaround Efforts: We continue to view this acquisition as a doubling down by SHN management, increasing the potential leverage from their turnaround efforts as the systemwide challenges will be magnified by the greater base. Although these challenges remain substantial, some cost reduction opportunities have been identified within the combined G&A and commissary/distribution systems.

* Maintaining Estimates and Opinion: We believe the acquisition will be dilutive to SHN in the near term and the added weight of the TPIE system will delay the Shoney's turnaround in this increasingly competitive environment. We are maintaining our Neutral (3-3) investment opinion and our EPS estimates pending the release of 1Q96 performance (expected by 4/3).

SH Acquisition Increases Challenges And Opportunities..

TEXT

ACQUISITION INCREASES CHALLENGES AND OPPORTUNITIES:

In an effort to improve their companies' longer term earnings prospects, SHN and TPIE managements proposed another merger structure to their respective shareholders and lenders. We believe this proposal will be accepted, providing greater challenges and opportunities to revive the Shoney's system.

The proposal is structured as a tax free reorganization of TPIE resulting in an asset sale valued at approximately 11x EBITDA (LTM 3Q95). SHN will issue approximately 6.7 million shares (\$59.6 million) and assume some of TPIE's debt (\$100-115 million), including \$51.6 million of 8 1/4% subordinated convertible debentures that are expected to remain outstanding. A previous roadblock regarding TPIE shareholders' claims to a lawsuit has been resolved.

SH Biometric Identification Market

TEXT

The Immigration and Naturalization Service (INS) and several state departments of motor vehicles (DMV) have begun using the TouchView. Identix sells product to Polaroid, which is a leading systems integrator for state DMVs. Several states have moved to add biometric identification to drivers licenses to ascertain that a driver is qualified to renew his or her license and to prevent minors from creating fake IDs.

SH Security Appltn Present Most Lucrative Long-Term Opportunity

TEXT

Security Applications Present Most Lucrative Long-Term Opportunity

While live-scan fingerprint systems were originally pioneered for law enforcement, we believe that the commercial markets have the potential to offer the most lucrative application of this technology, particularly in the area of security. We also believe that access control to computer networks and to secured areas will be one of the fastest growth areas in the entire security industry over the next five years. In a few years, it is possible that you would use fingerprint verification to unlock and start your car, gain access to the office, punch into work, sign on to your computer, shop on the Internet, and enter your house.

Security/access control systems have traditionally been based on what a person has (e.g., a card or a key) or knows (e.g., password or personal data). But almost every form of security has one disadvantage; keys or cards can be lost, stolen, or changed and passwords can be electronically discovered by unauthorized users. The only thing that cannot be changed is a biometric identifier. Telephone, cable, television, and computer firms are all working on biometric-like methods to provide individuals with secure access to their services. Fingerprint biometrics are one of the most appealing because of their accuracy, ease, and use by the government. Other biometrics are harder to scan and can inconvenience the user.

Identix's security products use patented optical scanners and fingerprint analysis algorithms together with proprietary image processing software, and standard microprocessor and computer memory to

STN

read, analyze, and compare the user's fingerprint with a template on file. The user enters an **identification** number or runs a smart card through a scanner and places his or her finger on the scanner. If the user's fingerprint matches the stored template, the user is positively

identified and he or she is granted access to a physical area or a computer database or a **transaction** is **authorized**. Emerging and

developing markets for fingerprint biometric **identification** include controlled access to highly secured areas, computer database access, verification of employee attendance, and electronic transactions including **cybercash** over the Internet.

Identix currently has three products addressing the security arena: TouchClock, which is used in time and attendance, TouchLock, which limits access to secured areas, and TouchSafe, which is a biometric terminal designed to authorize access to computer databases and has the potential to evolve into **authorizing** business

transactions

over the Internet.

SH Analysis Of Collaborative Deal With Corange

TEXT

COMPANY DESCRIPTION:

A press release was issued by CellPro after the close on Friday, March 31st reporting that CellPro's partner Corange had communicated its belief that the terms of the two companies' collaborative arrangement were unenforceable. As a result, Corange believed that it would not have to make the second equity investment in CellPro totaling \$60 million by the end of the month as specified by the **agreement**.

Summary of Collaborative Deal

The following is a quick review of the collaborative deal: In December 1993, CellPro and Corange signed a \$220 million agreement creating a collaborative effort between the two companies on the therapeutic and diagnostic applications of CellPro's cell separation technology, called the CEPRATE system. The agreement called for \$10 million to be paid at signing to CellPro, followed shortly by a \$50 million equity investment in January of 1994 (1.2 million shares @ \$43.04/share), both of which were paid. It also specified a second equity investment of \$60 million (1.25 million shares @ \$47.40/share) fifteen months after the first investment, which is the end of April 1995. Furthermore, an additional \$100 million in R&D support and milestone payments to be **determined** later were to be spread over the 5 years (Dec. '93 - Dec. '98) following signing of the collaboration. In exchange for these payments, Corange received worldwide diagnostic rights to the CEPRATE system, with a royalty to CellPro, and also a 50% share of the profits of the therapeutic uses of the CEPRATE system, except for the North American market which CellPro retained. In our opinion, the therapeutic application is the most important part of the collaboration in terms of both timing and magnitude, given the fact that CellPro has been launching the system in Europe over the last year and that the market potential is much larger.

SH Carticell Program

TEXT

Carticell is an autologous transplant of cartilage-producing cells. Orthopedic surgeons in Sweden, in collaboration with GENZL, have developed a surgical technique that achieves dramatic and never-before-seen repairs of "focal defects" (holes in knee cartilage) resulting from major knee injury. The first publication of the results appeared in the New England Journal of Medicine in late 1994, and since then there has been significant interest in the US and Europe in learning and adopting the technique. The technique involves removing small amounts of healthy cartilage, getting those cells to multiply in tissue culture, and transplanting those cultured cartilage-producing cells back into the site of cartilage damage in the knee. Genzyme Tissue Repair performs the cell amplification procedure, which is essentially customized for every patient; GENZL receives a small healthy cartilage sample from a hospital and returns a vial of cartilage-producing cells back to them a few weeks later for implananation.

Because this procedure is an autologous (self) transplant, and the material that is re-implanted is not altered (generatically or physically) from the starting material, there is currently no FDA regulatory procedure to undergo. (It is analogous to autologous bone marrow transplants). However, the company believes that it is set up to meet rigorous FDA standards should they develop in the future.

The fee that GENZL charges for the product/service is \$10,000 per procedure and the first US sales are beginning in the next few weeks. Based on the number of orthopedic surgeons that GENZL expects to train in 1995 and 1996, the company believes it could generate \$20 million of revenue from Carticell in 1996 and substantially more in 1997. Management believes that breakeven for GENZL could occur in 1997. Based on the incidence of serious cartilage damage in the knee that would be amenable to the procedure, the company believes that there are 100,000-200,000 potential candidates for the procedure in the US and Europe, representing a market potential in the hundreds of million to

STN

billion dollar range (depending on ultimate pricing). The acceptance and experience of the surgical procedure over the next 1-2 years will be key in determining the growth rate and ultimate penetration of this new surgical technique.

Technical Comment

Genzyme -- Neutral/Bullish. With substantial resistance in the 40-41 area, GENZ might have difficulty performing well over the short run. However, the primary trend appears favorable here, and 4-6 months down the road, we think GENZ will move to the upper 40's. Support is 35-37, an area in which the stock should be accumulated.

SH Carticell Program

TEXT

Carticell is an autologous transplant of cartilage-producing cells. Orthopedic surgeons in Sweden, in collaboration with GENZL, have developed a surgical technique that achieves dramatic and never-before-seen repairs of "focal defects" (holes in knee cartilage) resulting from major knee injury. The first publication of the results appeared in the New England Journal of Medicine in late 1994, and since then there has been significant interest in the U.S. and Europe in learning and adopting the technique. The technique involves removing small amounts of healthy cartilage, getting those cells to multiply in

EKD 10/03/2003

STN

tissue culture, and transplanting those cultured cartilage-producing cells back into the site of cartilage damage in the knee. Genzyme Tissue Repair performs the cell amplification procedure, which is essentially customized for every patient; GENZL receives a small healthy cartilage sample from a hospital and returns a vial of cartilage-producing cells back to them a few weeks later for implantation.

Because this procedure is an autologous (self) transplant, and the material that is re-implanted is not altered (genetically or physically) from the starting material, there is currently no FDA regulatory procedure to undergo. (It is analogous to autologous bone marrow transplants). However, the company believes that it is set up to meet rigorous FDA standards should they develop in the future.

The fee that GENZL charges for the product/service is \$10,000 per procedure and the first U.S. sales are beginning in the next few weeks. Based on the number of orthopedic surgeons that GENZL expects to train in 1995 and 1996, the company believes it could generate \$20 million of revenue from Carticell in 1996 and substantially more in 1997. Management believes that break-even for GENZL could occur in 1997. Based on the incidence of serious cartilage damage in the knee that would be amenable to the procedure, the company believes that there are 100,000-200,000 potential candidates for the procedure in the U.S. and Europe, representing a market potential in the hundreds of millions to billion dollar range (depending on ultimate pricing). The acceptance and experience of the surgical procedure over the next one to two years will be key in determining the growth rate and ultimate penetration of this new surgical technique.

(C) Lehmon Brothers Inc. Makes a market in the securities of this company.

SH Key To Investment Rankings

TEXT

Key to Investment Rankings: Numerical rank is a guide to the expected total return over the next year. 1 = Buy; over 25% total return. 2 = Outperform; 10%-25% total return. 3 = Neutral; 0%-10% total return. 4 = Underperform; 0% to negative 10% total return. 5 = Sell; negative 10% or worse total return. Risk rank describes the predictability and degree of risk in a stock based on the company, its business, and the industry in which it operates. (L)ow Risk = high predictability, conservative. (M)oderate Risk = moderately predictable. (H)igh = low predictability, aggressive. (S)peculative = exceptionally low predictability, highest riskiness. (V)enture = risk & return over multiyear time frame consistent with venture capital; should only be held in a well-diversified portfolio.

SH Trade Issues

TEXT

Trade Issues Likely On The Back
Burner Until The Next Recession

Steel moves relatively duty free between Canada and the U.S. Anti-dumping and countervailing duties, however, are another matter. They are a significant factor both in world steel trade, and in steel trade between Canada and the U.S. Trade with the U.S. is the major issue for Canadian steel companies. (Dumping is exporting at less than your home country sale price, or below your cost of production, and anti-dumping duties are applied when financial injury to the importing countries producers can be shown. Countervailing duties are applied when subsidies in one's home country allow low pricing of exports to the foreign country that causes injury.)

Of the four companies, only Stelco is currently facing significant dumping duties on a material product line - 69% on plate, and 28% on galvanized sheet. Dofasco was also impacted on galvanized, but its duty was only 11%. In aggregate, these products accounted for approximately \$250 million of annual exports of the two companies prior to the imposition of the duties. The duties were initially assessed in January 1993 and finalized in June. Stelco has responded by repositioning its product line. Dofasco is continuing to export galvanized (paying the duty), with careful monitoring to avoid trade conflicts.

Importantly, a major risk was averted in June 1993, when the U.S. concluded that there was no injury on a dumping case involving both hot and cold rolled sheet from Canada - products accounting for some \$500 million of total Canadian exports. Moreover, as mentioned earlier, the improving pricing and profit situation in North America steel diminishes the risk of duties until the next recession.

Unfortunately, however, the risk of duties has not been diminished on a longer-term basis, and the next recession will, no doubt, be exactly when exports are most needed for a Canadian producer, but also most likely to cause trade actions. Note also that trade cases can be filed retroactively relating to alleged dumping in periods several years ago. Indeed, U.S. producers recently filed a trade case against several Canadian producers relating to alleged dumping of wire rod in

STN

the early 1990s. The injury is **determined** based on conditions at the time, but applies into the future. (Stelco was the only one of our four companies that was targetted in the case, and its wire rod exports are only about \$50 million annually - a relatively **small amount**, though not immaterial.)

What about a common market for steel? We wouldn't count on it. True, there are some efforts under way to establish a North American steel **trade agreement** that would create a common market, thereby eliminating dumping and countervail issues. But the push for such an agreement is more from the Canadian side, and the prevailing American view seems to be that there is little to be gained by them from such an agreement. Similarly, there are ongoing rumblings about a broader steel agreement between larger numbers of countries, but few give such an agreement much likelihood of success.

SH Highlights And Rating

TEXT

INVESTMENT HIGHLIGHTS:

* Union Pacific Corporation offers to place Santa Fe Pacific Corporation into a voting trust.

* If consummated, transaction would lower our 1995 EPS estimate for UP-Santa Fe to \$4.30.

* Lowering investment rating from 2-1 to 3-2.

SH Summary And Recommendation

TEXT

INVESTMENT SUMMARY:

Union Pacific Corporation **revealed** the seriousness of its intentions to acquire the Santa Fe Pacific by offering a proposal to negotiate an acquisition which would place the Santa Fe into a voting trust during the time a merger case would be subject to ICC review. The places a difficult obstacle before Burlington Northern's efforts to merge with the Santa Fe, as Union Pacific's offer would place cash directly in the hands of Santa Fe shareholders as soon as a UP-Santa Fe merger were consummated, while Burlington Northern's current offer would not **allow** an **exchange** of stock to occur until ICC approval were granted, which would by 16 months away at best. While this is excellent news for Santa Fe Pacific shareholders, the burden of

STN

carrying the risk of the transaction will now lie with the Union Pacific shareholders. Furthermore, we estimate the this proposed mix of cash and stock would dilute Union Pacific's earnings by roughly \$0.10 per quarter until the two railroads are allowed to physically merge (probably by early 1998 at the earliest considering the time necessary to prepare documentation and a 31-month ICC review process). As a result, we are lowering our 1995 EPS estimate for UP to \$4.30 a share from \$4.70 a share. Because the use of cash and addition of debt will increase UP's long-term debt-to-capital from 38% to approximately 43% after placing Santa Fe in trust (53% debt-to-tangible equity), thereby consuming the free cash flow we envisioned UP using to increase dividends or buy back stock, we are reducing our relative P/E target for the stock from 90% to 80%. Give the market's P/E multiple, our new 1995 price objective for UP shares becomes \$52.25 a share, 10% above yesterday's close of \$47.50. Because virtually every other rail stock offers at least 10% upside, the relative attraction of UP's shares have lessened over the intermediate term. Accordingly, we have reduced our investment opinion from B-2-1-7 to B-3-2-7.

SH Conclusions

TEXT

Conclusions

Prospects for an agreement between the Russian government and the commercial banks are quite good, particularly as major legal disagreements between the two sides have been resolved. A final agreement could be reached within the next three to four months, indicating that VEB is a good buying opportunity at current prices.

The commercial bank package is likely to contain four instruments: Vnesh MYRA, PDI bonds, Interest Capitalization Bonds (ICBs), and a small amount of short term debt. The important points still to be negotiated are:

EKD 10/03/2003

STN

a. the amounts of 1994 interest to be paid in cash, with the balance to be capitalized;

b. the mechanism for **determining** amounts of cash interest payments versus PIK bonds in the next 2-3 years,

c. any linkage between future Paris Club **agreements** and the commercial bank **deal**.

We believe the Russian authorities will complete the \$500 mm downpayment for 1992/93 interest once the package is signed. An additional \$500 mm cash payment toward interest due in 1994 is expected during the early months of 1995, with the balance of 1994 interest put into Interest Capitalization bonds.

Valuing the new debt instruments is complicated by the wide divergence in views on Russian country risk. We believe that VEB loans should currently trade with approximately the same yield as Bulgaria or Venezuela. Thus, VEB loans should trade at prices of between 41-44% of face value.

Once a final agreement is reached, the new debt instruments will trade on a "when and If issued" basis. At that point, we believe that yields on VEB instruments will tighten to about 18-20%. This implies that the VEB package would appreciate in price to between 46-52% of face value. The Deutschmark loans should carry a premium due to the higher levels of PDI.

Russia's ability to service this agreement is quite strong. The nascent growth in the real economy, a solid macroeconomic adjustment program for 1995, and large hard currency earnings underscore Russia's shift toward economic recovery. In the near term, shortfalls in public sector revenues may constrain external debt service. However, the government may expedite a debt conversion program to gradually reduce the stock of hard currency debt. This offers significant opportunities for new investors, especially Russian residents. The government may explore alternative debt solutions, but postpone consideration of a Brady style approach until enhancement funds are available -- perhaps in two to three years.

SH Longer Term Impact Of Proposed Merger

TEXT

EKD 10/03/2003

STN

INVESTMENT HIGHLIGHTS:

McDermott International's Marine Construction group has been faced with two problems: first, excess worldwide industry capacity in heavy offshore installation equipment, much of which carries high fixed costs; and second, a slump in large offshore construction projects which has exacerbated the capacity problem. These problems have two solutions: First, higher oil prices would increase demand. Oil prices have been rising lately and, once some confidence develops that prices can stay in the mid-teens or perhaps higher, we expect McDermott's orders and backlogs to accelerate, probably in fiscal (March) 1996. The second solution is a rationalization of the industry's installation capacity and McDermott's recent announcement that it will be merging its marine business with that of Offshore Pipelines, Inc (OFP) and ultimately closing some of their combined capacity does provide some optimism for potential improvement of the industry's overcapacity problem.

Many of the financial details of the merger are yet to be decided, OFP's board and shareholders must **approve the transaction** after more due diligence and U.S. regulators will review the transaction for anti-trust implications. Consummation of the merger is at least four and perhaps six months away.

McDermott's shares were up almost 25% following the announcement and we would not chase them here. We do, however, believe that longer term investors should consider McDermott and so we have raised our long term rating from Above Average (2) to Buy (1). Our intermediate term rating stays Neutral (3).

We applaud this step, on McDermott's part, to continue the process of gaining more control over its future by impacting the supply side of the marketplace, and not just waiting for oil prices to **determine** the demand side. Moreover, OFP brings McDermott a highly competitive operation in shallow waters to complement its own strength in deep waters. OFP also adds to McDermott's geographical strength in the better markets like India, Southeast Asia and West Africa. OFP has no operations in Europe.

SH Investment Highlights And Rating

TEXT

INVESTMENT HIGHLIGHTS:

* BellSouth is investing \$1.5 billion in exchange for 12-13% of QVC/PCI assuming QVC's bid is successful. Dilution is minor (2-3%) but price quite high at 20x operating cash flow.

* Given the multiple, BellSouth is betting on the development of sizeable consumer demand for interactive video services -- a speculative market that will likely take many years before we can even determine its potential and that could cannibalize (in part at least) some of Paramount's existing business.

* We remain neutral on BLS shares as we are relieved that earlier speculation (which caused weakness in the stock) that they might independently bid for all of Paramount did not materialize.

STN

SH QVC Transaction Overview

TEXT

OVERVIEW OF THE DEAL:

BellSouth has **agreed** to invest \$1.5 billion in QVC. Through a multi-step process, BellSouth in effect will invest \$1 billion for 16.7 million QVC shares at \$60/share (a 16% premium to QVC's current share price) and will also invest \$500 million in a 6% convertible exchangeable preferred (convertible at \$66/QVC share, a 27% premium). If QVC's bid for Paramount (PCI) is successful, BellSouth will end up with the following:

1) 12-13% of the combined QVC/PCI assuming exercise of the convertible.

2) Paying roughly 20 times the combined 1994 operating cash flows of QVC and PCI (approximately \$800 million) which Hal Vogel, ML entertainment analyst, estimates could grow in the 12-13% range (10% PCI, 20% for QVC). Our numbers are less precise on a P/E basis as we do not have estimates for QVC at hand, but we note Paramount is selling for a lofty 31 times Hal Vogel's estimated EPS for 1994. Since many media-type stocks sell at cash multiples that are 100% of growth, we suspect the price paid here includes 5-7 operating cash flow multiple points for the hopes for interactive video demand -- i.e., the bet on interactive video is big.

SH Investment Highlights

TEXT

INVESTMENT HIGHLIGHTS:

Bombardier has positioned itself to serve niche segments within transportation, aerospace, defense and consumer markets in Europe and North America. The movement of these two continents into large trading blocs, i.e., The European Common Market and the North American Free

Trade Agreement, offers substantial opportunity for Bombardier with

production facilities and distribution in both markets creating a strategic presence that builds strong relations with its customer base. The company has invested heavily during the last five years in new program development such as the only 50-seat passenger jet for regional airline carriers, a new medium size business jet, and new generation transit and long haul passenger trains, as well as in major acquisitions that have either expanded production expertise, geographical market penetration, offered complimentary product lines or provided technology transfer. We believe that this investment will

EKD 10/03/2003

STN

begin to show an attractive return as worldwide economic activity improves during BBD's fiscal 1995.

Net income has increased at a 15% compound annual rate for the past five years. Although we estimate that current earnings growth will moderate principally due to a slowdown in business and commercial aircraft deliveries and losses incurred on an existing contract to provide train cars to the English Channel Eurotunnel consortium, we believe that the outlook beyond F94 is favorable. Overall company backlog on 1-31-93 was up 53% to \$8.1 billion. Although this gain is unusual, it does reveal the potential business for the company during the next 10 years. We believe that long term EPS growth can average 12% per year, or better. Based on our current year EPS estimate, the common shares are presently trading at a 12.5 P/E or at the low end of their past three year average high -- low P/E range of 18-to-10 times current year estimated EPS. We believe that BBD's P/E will expand as investors look past the Eurotunnel contract and current softness in aircraft deliveries and start to anticipate Bombardier's potential in F1995 and beyond. Accordingly, we view the common shares as attractively priced and we are adopting an Above Average (2) rating for both the intermediate and long terms.

SH Co. Positioning - New Products: Sabre Electrosurg. Generator

TEXT

The Sabre 180 is a small, low-power, cost-effective unit that is well positioned to benefit from a new gynecological procedure that is performed in an office setting. Loop Electrosurgical Excision Procedure

EKD 10/03/2003

STN

(LEEP) allows for the treatment of lesions and disease of the vulva, vagina, and cervix (transformation zone) that can be an early indication of cancer. If a lesion is discovered, it is removed in the physician's office rather than in the hospital. This procedure removes the entire lesion, rather than just a small amount of tissue that is then biopsied as in the historical method, creating a superior specimen for histopathologic diagnosis to determine if the tissue is cancerous.

Importantly, LEEP also serves as the treatment to the disease, usually eliminating the need for a hospital visit. To date, very few of the 17,000 U.S. gynecologist's offices have generators. Given the success rate, ease of use, and volume of the procedure, we anticipate that most physicians will purchase a unit within the near future. As a result, we estimate the Sabre 180's initial market potential is approximately \$60 million. In addition, CONMED received FDA approval to market the disposable instruments for LEEP in February of this year, which provides a continuous flow of repeat sales.

SH Financial Analysis

TEXT

FINANCIAL ANALYSIS: Through 1991, CONMED's sales grew at a five-year, compounded average rate of over 22%. We estimate that over one-half of this gain is attributable to acquisitions. Net income accelerated by nearly 62% during the same period. Recent results continue to show improvement as sales and net income advanced 25% and 71%, respectively, over the last 12-month period. Increased generator sales and the February 1992 acquisition of Tech-Switch accounted for most of the improvements. The introduction of minimally invasive products also aided results. CNMD's gross margin, historically greater than 45%, expanded to an all-time high of 47.31% owing to a better product mix and economies of scale. We anticipate continued margin improvement as scale economies become more pronounced as sales growth accelerates. SG&A as a percent of sales continues to decline illustrating the effectiveness of management to streamline operations. Approaching 35% in the mid-1980s, the ratio now stands at a record low of 27.3% on a trailing 12-month basis (excluding R&D).

An examination of the company's historical profitability illustrates its growth from simply a supplier of commodity-type products to a full-line provider of electrosurgical products. Following the 1989 charge to earnings related to Medac, pretax margins have increased significantly reaching an all-time high of 17.4% over the past 12 months.

(Graphical Material Omitted - Call (800) 662-7878, (617) 345-2000, Or UK (071) 815-3800 For Price And Availability: CONMED Corp. Profit Margins And Estimates 1983-93)

CONMED's balance sheet is exceptionally strong as over 20% of assets are in cash following the June 1992 secondary stock offering of 900,000 shares. The company has virtually no long-term debt and has still managed to generate a return on shareholders equity in excess of 13.0%. A positive cash flow is further indication of financial health.

SH Multilateral Assistance Programmes - IMF & World Bank Aid

TEXT

In December 1991 the Russian government, contemplating its ambitious price liberalisation and budgetary reform plan for the following year, asked the IMF for membership and a comprehensive aid package to support the reforms. The IMF set up an entire department with some 120 - 130 economists to cover the former Soviet Union in response, but decisions on membership have to be approved by a governing Board, which, in practice, requires the support of the main Western industrial countries. US approval for Russian membership was finally announced at the end of 1991 and the rest of the G7 countries quickly agreed to support the bid. By the end of January 1992 all three Baltic States plus Russia, Ukraine, Kazakhstan, Armenia and Azerbaijan had formally applied to join the IMF and all that seemingly remained to be done was to sort out their "quotas", which **determine** voting rights on the Board and amounts which can be drawn upon.

By the end of April 1992, negotiations had been concluded with 14 of the 15 former Soviet republics (excluding Azerbaijan) for full IMF membership. The G7 agreed to a rouble stabilisation fund of US\$ 6 billion and other credits and loan guarantees amounting to US\$ 18 billion for Russia subject to conditions such as eventual repayment of all loans. Up to US\$ 4 billion of the stabilisation fund is to be put in place by the mid-Summer, **allowing** the republics to liberalise currency **dealings** further and introduce a viable anti-inflation policy with a more stable exchange rate. Russia is likely to receive 2.92% of voting rights in the World Bank and the fifteen former Soviet republics 5.05% altogether. Russia's share in the IMF is expected to be 3% and the other former Soviet republics will probably share a further 1.75%.

EKD 10/03/2003

STN

The principle of World Bank membership for thirteen republics (except Azerbaijan and Turkmenistan) was agreed at the end of April 1992.

Now that IMF membership has been secured, a full programme of technical assistance and financial aid can also be expected for each republic.

The Bank envisages loaning US\$ 12-15 billion to the former Soviet republics by the end of 1995.

SH Multilateral Assistance Programmes - EBRO Aid

TEXT

4.2.3. European Bank for Reconstruction and Development (EBRD)

Aid

The EBRD was formed as an investment bank to assist in the financing of structural reform, primarily in the private sector, in Eastern Europe. It was the first international organisation, outside the United Nations group, to welcome the Soviet Union as a member. However, the USSR was the only country to face borrowing restrictions. It could not obtain more from the EBRD in loans than its share of the paid-up capital (that is 6%) unless 85% of the bank's owners decided differently. Thus it could only borrow potential amounts of about US\$ 216 million over 5 years, a small amount given the size of the Soviet economy.

SH Co. Law/Private Sector - Privatisation Initiatives - UPDATE

TEXT

In order to carry out this privatisation programme, significant changes must be made to Bulgaria's legal, financial and fiscal systems.

The quasi non-existence of the private sector is a consequence of the restrictions which have long been imposed on private companies (they could not employ more than 10 persons, could not enter into joint-ventures, etc.) and were only lifted with the amendments to Decree 56 in April 1990. Due to the monopolistic structure of the economy (dominated by 600 firms) the

privatisation process will most likely prove to be difficult. Moreover as the Bulgarian Parliament, has a major fear that it might be accused of "selling Bulgaria to foreigners", the Law on Privatisation is still pending. While waiting for further reforms, the private sector is facing numerous problems, such as lack of initial capital, hard currency constraints and the difficult supply of technology and raw materials.

3.2.2. The Draft Privatisation Law

The Bulgarian government has committed itself to carrying out a privatisation programme. However, no legislation has yet been passed. If transfers of small amounts of assets have already occurred within the services sector, no actual privatisation has yet taken place.

A draft Privatisation law is currently under preparation. It would follow closely some of the recommendations made by the IMF.

This Law would allow the sale of small-scale trade and services enterprises and the transformation of larger enterprises into joint-stock companies, whose shares would then be sold to private domestic and foreign investors. To facilitate these sales, a Privatisation Agency would be created, which would not be placed under the guidance of the Council of Ministers but be an independent organisation.

The Privatisation Agency would appoint the state enterprises to be privatised. When the enterprise is ready for sale, the Agency would publicise its availability and the date on which the sale will take place (for small enterprises) or the shares offered

STN

(for larger enterprises). In the case of small enterprises, the highest bid would win. For larger enterprises, shares would be offered at a predetermined price through a bank designated by the Agency. Some of the shares could be set aside for the enterprise's staff, and within a three year period, interest-free loans would be made available to them for their purchase. The agency would also **determine** the number of shares, which could be sold to foreign investors. Privatising companies with annual turnover exceeding Levs 150,000,000 would be subject to the Parliament's approval.

SH Ontario - Election Of The NDP Government

TEXT

Perhaps unsurprisingly, the research paper concluded that the BC system involved greater start-up costs than the Quebec model (up to C\$1.6 billion against \$300m) and would involve a longer implementation period (2 years against 18 months). A move to either system would raise the issue of industry compensation. The industry has been advised that

EKD 10/03/2003

STN

it may be entitled to compensation under the Free Trade
Agreement (with
the United States) and under the Canadian Charter of Rights and
Freedoms, if the government pursues partial or full nationalisation. It
is worthy of note that General Accident, as a precaution, has passed
over ownership of Pilot Insurance to its US subsidiary in order to
enhance its claim under the Free Trade Agreement, should
this prove
necessary.

For its part, the government has been sending mixed signals. Mr.
Kormos was sacked in March but it is unlikely that this will alter the
government's final decision. At the time of writing, therefore,
uncertainty persists. However, in our view, a Quebec-style solution is
the most likely outcome due to its lower start-up and its shorter
implementation period. Moreover, any compensation claim (assuming its
validity) would presumably involve a relatively small amount
since the
industry, even with the no-fault system, will generate only a
relatively modest profit from the bodily injury coverages which would
be lost to the public sector.

In any event, while the government ponders its policy options, the
OMPP has remained intact. Indeed, this may continue to be the case for
sometime yet since, even if the government pursues nationalisation in
some form, the implementation process will be quite protracted. Hence,
the OMPP is likely to be dominant factor in determining auto
operating
results up until the end of 1992 at least.

SH Ontario - Implications Of The OMPP

TEXT

Implications of the OMPP

One of the objectives behind a no-fault system is the reduction of
overall claims costs. Since, in this instance, the verbal threshold
would appear to be tightly defined, the omens on this point are
encouraging, although it must be recognised that the ultimate level of
savings will be determined by the courts' interpretation in practice
of
the thresholds and this may only become clear over a prolonged period.
Quantifying the level of cost savings to be generated by the threshold
and the auto safety, tort reform and anti-fraud measures in the package
with any degree of accuracy is extremely difficult. However, experience
with verbal thresholds in the USA (and we accept the problem of using
data from a country with a different legal system) suggests that the
savings will be significant.

HIGHLIGHTS:

* ATT/NCR reach definitive merger agreement.

EKD 10/03/2003

STN

* Accounting treatment of the transaction still to be decided by SEC.

* Merger could dilute 1991 estimate by about 5% if pooling approved.

* See potential for possible near term 10% trading move but not changing A-3-2-7 opinion.

SH The Merger Agreement

TEXT

DISCUSSION:

AT&T and NCR, after six months of negotiations, have finally reached a definitive merger agreement pact. The exchange of shares

agreement is subject to allowance by the SEC of pooling of interest accounting. Under the agreement, NCR holders would receive shares of AT&T equal to \$110 per share subject to a collar on AT&T's price of \$34.125 or 3.223 shares on the downside and \$40.625 or 2.7 shares on the upside. If pooling is allowed, we see earnings dilution of about 5% this year; our current 1991 EPS estimate of \$2.60-\$2.65 would be \$2.50. This estimate is before a one-time charge which could be \$500 million to \$1 billion and will be determined several months from now. AT&T estimates it will take 4-5 months to complete the merger. If pooling is not allowed, purchase accounting would result in the writing off of substantial goodwill and would cause greater dilution.

AT&T has pushed hard for this merger because: 1) NCR will provide the needed critical mass in the computer area; 2) Communications and data networking will converge and AT&T wants to be positioned; 3) NCR derives 62% of its sales internationally where AT&T would like to concentrate its efforts; and 4) There are synergies especially with Bell Labs which could develop.

SH Summary And Recommendation

TEXT

CONCLUSION:

Despite this rationale, which has some merit, we are retaining our 3-2-7 opinion of AT&T for the following reasons: 1) With NCR, about 15-20% of AT&T's revenues would be from computers. The outlook for this industry does not appear especially positive over the next few years, according to our computer analyst; and 2) AT&T has had problems in its computer business. It remains to be seen if the NCR merger will correct these problems. While we believe that the lifting of uncertainty caused by the infighting related to the merger and the positive potentials of the merger will be highlighted which could cause a trading move on the order of 10% on the upside, we do not see sufficient potential to raise our opinion.

STN

INVESTMENT HIGHLIGHTS:

* BellSouth pays \$410 million or \$167/POP

* BellSouth expects charges of \$0.01/share in 1991 and \$0.06/share in 1992.

SH McCaw Cellular Property Agreement

TEXT

DISCUSSION:

BellSouth and McCaw agreed to terms under which BLS would acquire from McCaw cellular properties comprising 2.67 million POPS in Wisconsin, Illinois, and Indiana in exchange for \$360 million in cash, the elimination of McCaw's \$50 million obligation to Graphic Scanning, which BLS will acquire, and BLS's 28.57% interest in the Rochester, NY cellular property, equating to about 280,000 POPS.

BLS estimates this proposed transaction will reduce earnings by \$0.01 in 1991 and by \$0.06 in 1992. Based on these estimates, we will retain our estimated earnings for 1991 at \$3.60-\$3.70 but will reduce our 1992 EPS to \$3.75-\$3.85 from \$3.80-\$3.90.

This transaction would allow BLS to strengthen its position in Indiana and Wisconsin where it is the dominant non-wire line carrier. McCaw will add \$360 million in cash which can be used to reduce debt for the near term to help position McCaw for its September "shot-gun" transaction with Pacific Telesis for the San Francisco cellular property. The San Francisco property is jointly owned by McCaw (32.9%), PAC (61.1%) and Associated Communications (6%). Under the terms of the "shot-gun" agreement, PAC will **determine** a price and McCaw will decide

either to buy PAC's interest or sell its interest at that price.

SH Valuation

TEXT

VALUATION:

We valued the McCaw-BLS transaction in a straight forward fashion by first netting the POPS transferred (2.67 million less .28 million = 2.39 million). The cash consideration consists of \$360 million plus \$50 obligation from McCaw to Graphic Scanning. According to BLS, the \$50 million obligation was due two years hence, we therefore reduced the obligation to \$40 million, giving credit to the time value of the debt. Our resulting valuation is therefore \$400 million for 2.39 million POPS or \$167/POP.

STN

INVESTMENT HIGHLIGHTS:

For some time there has been speculation that the company is takeover target and finally in a press release dated October 19, HCSB management **revealed** it has received an unsolicited offer from Rose Associates for the acquisition of 60% of outstanding shares. At this time, we cannot confirm many details; however, Rose has stated that the deal is valued at \$85 million, implying that the offer is for 100% of the shares. In a unique approach in what appears to be an attempt to utilize a highly capitalized savings bank's own capital to effect a takeover, it appears Rose Assoc. intends to finance a cash payment of \$24/ps using the bank's so-called excess capital. The offer includes \$4/ps face value of unsecured subordinated debt for a total consideration of \$28/ps. It is our understanding that to effect this transaction, Rose is soliciting the remaining 40% shareholders to exchange their shares for an enhanced ownership position in a proposed holding company.

Going forward we expect the shares will remain volatile, trading on acquisition developments rather than as fundamentals and peer group pricing would warrant. Although Rose Associates has been a long term investor in Home & City, currently holding a nearly 9% position, and apparently remains committed to pursuing this offer, we would caution investors that this not a "done deal" nor has a definitive ***agreement***

been signed. Near term the shares may offer limited upside until more information is disclosed. Our most optimistic scenario is that the offer will gain credibility thus inducing pricing strength so that over time the shares could recoup lost ground. Should such pricing strength emerge, we would recommend lightening positions. Given the vagueness of the offer and considering it will take several quarters to complete the due diligence and regulatory process should the proposed offer prove successful, we believe the downside risk remains considerable so we are retaining our QRQ rating of D-4-3-7.

TEXT

INVESTMENT HIGHLIGHTS:

There is an article in the August 6 edition of Barron's that questions two of the company's accounting procedures -- /1/ Some year-end adjustments taken in 1989, and /2/ Sporadic use of pooling-of-interest accounting. It is important to note that the article does not say that the company is in violation directly or in spirit with any SEC or Generally-Accepted Accounting Principles (GAAP)

procedures. Rather, the article appears to disagree with the policies of those agencies imposed on the company and the impact those policies have on the company's financial results. Further, the article lacks, in our judgment, an understanding of waste service industry fundamentals.

EKD 10/03/2003

STN

The article focuses on two issues. First, it contends that the company exercised liberal accounting to record a \$70.8 million profit on the sale of five million Chemical Waste Management shares and used that gain to offset \$70.6 million in costs which the article admits did not know whether the company had to or chose to recognize in 1989. In essence, the company recorded a \$70.6 million gain on the sale of the above-mentioned stock and had a cash infusion of \$110 million. The article implies the company's gain recognition was arbitrary. The company had no choice but to recognize that gain under GAAP. The SEC requires that this type of gain be accounted for in one of two ways -- It can either be shown as a direct credit to equity on the part of the parent, or it can be shown as a direct credit to equity on the part of the parent, or it can be shown in the income statement as a gain. In 1986, the company chose to adopt a method that would allow the gain or loss, if there happened to be a loss, to be reflected in income. Accounting rules indicate that once that accounting principle is adopted, it must be applied on a consistent method; thus the 1989 transaction had to be accounted for in the same manner as the 1986 transaction. As an offset to this gain, the company primarily, but not entirely, established a reserve for costs associated with what it anticipated to be new government regulations that were placed in the Federal Registry in last year's fourth quarter that will require the operators of solid waste disposal sites to monitor those facilities for 30 years after closure. The company did not have to address these costs; they could have been expensed as incurred. These costs would have equalled approximately \$0.005 per share per year if the company chose to expense this item for 30 years. The article deduces that 1989 earnings per share would have been up 12.5% rather than the 21% reported because of the gain. What the article fails to note is that had it not been for the gain, the incurring of the new regulatory costs would not have been addressed in the first place. We would stress that the equity offering created a cash infusion, whereas the establishment of the monetary reserves is a non-cash item. Waste Management is the only company in the industry to financially identify and address what these costs will be.

SH Offer For Consumers Gas

TEXT

CONSUMERS GAS: A Sensible Deal But Only If Regulatory Hurdles Can Be Overcome

British Gas intend to make a (L)565 million offer to acquire Consumers Gas, a gas distribution company centered around Ontario. The

STN

deal itself has strategic logic -- there is scope for skills and technology transfer and British Gas can reduce its dependence on the UK economy, regulation and politics. The deal should not dilute EPS in 1990/91, even though the offer price is at around a 20% premium to the 12 month high.

However, the deal introduces additional uncertainty on a six month view. First, there is uncertainty if the deal will be allowed to proceed as structured or in a form which is acceptable to all parties, and second, there is uncertainty as to the profitability of the company more than one year out, since Consumers Gas is subject to a regulatory review of its business this Summer.

We believe this uncertainty will dominate investor considerations of the deal - at least until the end of the Summer - and we see no reason to alter our negative stance on the stock.

* The Deal. British Gas is to offer C\$34 per share for all the outstanding shares in Consumers Gas. Consumers Gas is 82% owned by GW Utilities (a 79% subsidiary of Olympia and York) and has agreed to accept the offer. The remainder trades on the Toronto Stock Exchange.

The price may be adjusted upwards to reflect disposal proceeds of two non-core utility businesses in Consumers Gas (Arbor Living Centres, a retirement home company, and Telesis Oil and Gas, which owns a small parcel of gas producing properties in Ontario). The price implies a demanding 12x exit P/E.

* Immediate financial impact on British Gas. In the year to 31/3/91, the impact on British Gas' EPS would be negligible dilution. Beyond this period, the outcome of the regulatory review (see below) will determine the EPS impact. The deal would increase estimated net debt at 31/3/91 from (L)1.55 billion (18% of net assets) to (L)2.55 billion (28% of net assets).

TEXT

INVESTMENT HIGHLIGHTS:

On Monday July 17th, Cummins Engine announced that J. Irwin Miller (a great nephew of the founder of Cummins, a board member, and chief executive officer of the company from 1934 to 1973) and his sister Clementine Taugeman have purchased Hanson's 9.8% stake in Cummins Engine for about \$72 million (1,048,000 shares at \$69.34 per share). These two investors then exchanged these shares with the company for \$67 million of newly issued Cummins junior 5-year notes. At the same time, Miller and Taugeman exchanged all their present holdings (about 5%) of Cummins stock for new Cummins preferred stock valued at \$37 million. The notes can be exchanged on a dollar-for-dollar basis for additional shares of preferred stock. Both the new Cummins notes and non-voting preferred shares yield 10% and are convertible into common stock at a conversion price of \$83.85 per common share. Subject to shareholder approval, the preferred shares will be exchanged for a series of junior preference shares having identical terms to those of the preferred shares except for full voting rights and a reduction of the dividend by .25 percent to 9.75%. Similarly, the interest rate on the notes will be reduced to 9.75%, and the notes will become exchangeable for the junior preference shares. If the Miller family decided to convert their holdings into common shares, it would represent about 11-12% of the outstanding. Together with the ESOP

STN

announced last week (where the company issued 1.2 million or about 11% of the outstanding common and plans to repurchase the same amount on the open market), this puts about 25% of the stock into "friendly" hands. Hanson has entered into a standstill agreement with the Miller family where it cannot buy Cummins' shares for the next 10 years. Cummins undoubtedly is pleased to have Hanson out of the picture, as it "resolves a troubling situation".

Considering both the ESOP and Monday's transaction, the company expects little impact to primary EPS for quarterly income in the \$10-15 million range, a positive impact for amounts above that range, and a negative impact for amounts below that range. However, total debt has increased by \$142 million since the end of the first quarter, which has raised the debt-to-capitalization ratio to 51%. The board may consider obtaining additional equity to alleviate the company's leveraged financial condition.

On this news, Cummins' stock was off 4 5/8 points Monday to close at \$59 7/8. Starting in December 1988, Hanson had accumulated its stake at prices between the high \$40's and low \$60's. Now with most of the takeover fluff out of the shares, the stock's valuation should be **determined** more on traditional fundamentals. Therefore, with weak heavy-duty truck demand currently, we maintain our Neutral (3)... intermediate term investment rating. Second quarter EPS should be released on July 24, and management expects earnings to exceed 1Q primary EPS of \$1.161 (our 2Q EPS estimate is \$2.00).

STN

TEXT

Foreign Trade Alert

The October Trade Deficit

The U.S. merchandise trade deficit improved by only a **small** ***amount*** in October, to \$8.9 billion from \$9.2 billion in September. Both exports and imports fell on a seasonally adjusted basis (1.1% and 1.7% declines, respectively).

Imports are on track with the forecast. The October result was about equal to the average for the third quarter. The composition consisted of declining oil imports (mostly falling prices) offset by rising nonoil imports (reflecting economic growth in the United States and a rebound in items, such as imported autos, that underwent inventory corrections earlier in 1988).

October's export performance was disappointing, being only slightly above the average for the third quarter. This result is not consistent with the fundamental **determinants** of exports which suggest greater strength. Foreign economies persist in growing faster than forecasts. Long lags between the time the currency changes and when real exports react suggest that demand for U.S. exports should still be benefiting strongly from the weaker U.S. dollar that did not bottom on a monthly average basis until last April.

The composition of the disappointing export result also suggests data volatility rather than fundamental causes. The weakest major category of exports was industrial materials and supplies, which reached a monthly low for 1988 in October. Yet these types of commodities typically experience above average growth when aggregate economic activity is expanding. Capital goods exports have also purportedly been growing relatively slowly, yet the capital goods boom is an international phenomenon. In most of these industries, U.S. producers have a significant cost advantage at current exchange rates.

Consequently, a rebound in exports is expected in coming months, contracting the trade deficit further. The recent data, however, is a foretaste of the change in the fundamentals suggesting that the improvement will stop in mid-1989.

SH The Canadian Free Trade Agreement

TEXT

The Canadian Free Trade Agreement in Context

In about two weeks, tariffs on trade between the United States and Canada on computers, furs, unwrought aluminum and ferro alloys, animal feed, some meat products, and some paper-making equipment will be removed under the new **trade agreement**. Over the next five years, tariffs will be removed from items such as paper, paints, machinery, replacement auto parts, chemicals, and furniture. Remaining tariffs, such as those on textiles and apparel, agricultural products and steel, will be revoked over a ten-year period. Freer trade in services and more liberal conditions for cross-border investment are part of the **agreement**.

The superficial impacts of the **trade agreement** would not seem to be large. Fully 65% of U.S. exports to Canada already enter duty free, as do 80% of Canadian exports to the United States. The bulk of this duty-free trade is in motor vehicle manufacturing and lumber. Average duties charged by Canada amount to about 6% and to about 5% by the United States (averaging in the nonduty items at zero). Assuming a price elasticity of around 1 (that is for every 1% change in price, demand changes by about 1% in the opposite direction), it would seem that the quantity of U.S. goods exported to Canada would only increase about 5%, with about a 6% rise in the quantity of goods imported from Canada.

STN

Question

Do you see any changes in the manufacturing process?

Mr. Anker

Nothing revolutionary. This slab casting will benefit minimills. More steel will be continuously cast, but the technology the industry will use for the next five years is generally in place. A thin slab caster permits direct rolling of sheet steel from a relatively **small amount** of hot metal. The slab caster in use today requires million ton batches of steel. The smaller machine will change the economics of some flat-rolled steel products and will probably increase the penetration of electric furnace-melted steel into the U.S. sheet market. The minimills employing this technique will increase their share of the total steel market. The question is whether these will be basic changes in technology. Over the next decade, massive amounts of steel will continue to be produced from blast furnaces, Basic Oxygen Furnace shops, and the continuous casting processes. The changes occurring in that process are evolutionary, not revolutionary.

SH Nucor

TEXT

Question

How will the thin slab caster affect Nucor?

Mr. Anker

I think Nucor will increase its market share because of its lower cost for some steel products. That will be very positive for the company. The industry, however, will not be able to separate itself from economic trends over the next five years.

SH Earnings Mix

TEXT

Question

Will the mix of the steel industry earnings change over the next three or five years?

Mr. Anker

During the last five years, the hot-selling steel products have been the flat-rolled products. Pipe, plates, and structurals took a backseat. Now some shifts are occurring. The increased growth of export demand for U.S. products resulting from the lower dollar improved demand for American-made machinery and with it better demand for heavier steels. Flat-rolled and coated sheet have stayed in strong demand.

SH Positives In Outlook

TEXT

STN

Question

What do you see that is bullish for the short and long term?

Mr. Anker

Short term you have a very strong steel environment. Our present visibility is out about two quarters. Some of the recent strength comes from an inventory buildup. We should be on the verge of some price improvement; in fact, we could see a 4-5% price increase over the remainder of this year. Not all of the hikes announced in the trade press will flow directly to revenues. Deals, contracts, and residual agreements will remain in effect. The steel industry has been under such enormous economic pressure during the last five years, it would not be surprising if management believed that today's success may not last. Over the short term, this economically determined industry is benefiting from the business cycle.

We remain conservative about the longer term. Here are some developments that could have positive long-term implications. We do not see price discounts being used in battling for market share, as has often been the case in the past. We see a willingness to restrict production to low-cost equipment. In past periods of strong demand, every piece of equipment that could produce the product would be running - that is not the case today. Mills stay with their most-efficient facilities. This has helped keep supplies tight. Permanent closing of uneconomic capacity is still necessary. The industry needs to emphasize its position as a materials maker in competition with other metals, plastics, and aluminum. For too long price has been steel's major marketing tool; it must add service, product innovation, and entrepreneurship to succeed over the longer term.

SH Concerns

TEXT

Question

What are you nervous about? What are some of the possible clouds out there, short and long term?

Mr. Anker

In this type of environment we worry about inventory buildup. Customers who were demanding steel in the fourth quarter of 1987 often found that deliveries were delayed. That experience encourages double ordering, which can lead to inventory buildup.

Question

Customers overbuy for a while?

Mr. Anker

Yes, they tend to overbuy. Eventually that overstocking leads to price pressures. The worst experience was in 1975. Inventories were built up in 1974 and were then liquidated. Steel consumption in 1987

STN

exceeded forecasts by a wide margin. Some of the difference may have been accounted for by inventory accumulation rather than demand. As a result, we have some concern about how long this level of consumption can continue.

SH Equity Recommendations

TEXT

Question

What are your recommendations for equities in this industry?

Mr. Anker

We rate the major steel companies we follow as Holds. Some provide better value than others. These stocks have had a very good run. We believe they should be held at today's prices.

SH Driving Forces

TEXT

Driving Forces

The financial industry is interested in smart cards because they offer far greater security and versatility than magnetic-stripe cards. Fraud, bad debt, and the authorization procedures to counteract these problems account for 30% of bank card transaction costs. By adding improved security features and a small amount of storage capacity to a credit card, smart cards will reduce transaction costs and help prevent losses. Smart cards could allow access to cash, credit, financial records, pay television and telephones, and high-security buildings and computer networks.

MasterCard and Visa, the two largest credit-card operations, are likely to pioneer the large-scale use of smart cards in the United States. Now evaluating the cards, they will probably adopt them in the early 1990s. We doubt they will have much difficulty convincing their cardholders of the benefits of smart cards.

The major force driving the adoption of smart-card technology in medicine is economic: smart cards will cut the cost of processing transactions and reduce losses from duplicated medical tests. They also offer a modicum of convenience for patients. In the main, however, the superior security and versatility smart cards offer are not vital to health care applications.

SH Technology Development

TEXT

Technology Development

The key attribute smart cards must possess is robust, accessible, and inexpensive electronic memory. Their usefulness will also depend on a large installed base of devices to read, write, and manipulate card data. Security features will be important if the cards are used to store confidential medical data but are unimportant for most medical uses.

American Express is testing a smart card that links cardholders to health care credit lines and claims processing as part of a physician's office management system. The number of cardholders reached about 85,000 in 1986. A physician's office staff can use the card to submit claims electronically to central mainframes through a card reader attached to a personal computer. Patients benefit from the system's ability to subtract reimbursement from insurers before issuing bills. But the experiment has not been a success; patients seldom use the card. They may be reluctant to carry another credit card or to use one that lets providers bill them instantly.

Visa is sponsoring tests of a hospital admissions smart card under an agreement with Affiliated Health Care. The card will provide access to a medical credit line through Visa and ease the admissions process.

STN

by carrying **identification**, insurance, and other data on cardholders. The card will also carry a brief medical record for use in emergencies. Plans to link the cards to a claims processing network are incomplete.

Lifecard International, a unit of Maryland Blue Cross/Blue Shield, markets a system that links physicians both with their hospitals and with claims payers. Lifecard plans to use Drexler Technology's optical memory card to hold insurance data, patient information, and full medical records.

SH U.S./Japanese Semiconductor **Trade Agreement**

TEXT

Also, not to be dismissed, is the possibility of repercussions developing from Europe, which has been silent up to now. Since about two-thirds of Europe's semiconductor requirements are imported, there are reports that the European Economic Community may challenge the semiconductor **trade agreement** inasmuch as it, in effect, *****determines***** the prices paid by European users. There is also fear on their part that the agreement may result in favoring U.S. market access into Japan at the expense of their own.

The issue of increasing access to the Japanese market is equally complex regarding the possibilities of success. At the outset, history shows that implementing market access agreements with the Japanese has generally been very frustrating, particularly when the details and the requirements are as nebulous as with the current semiconductor **trade agreement**. In fairness, however, we note that the Japanese have many legitimate reasons for doing only a **small amount** of business with the U.S. semiconductor industry. One reason is the fact that about 50% of the Japanese semiconductor demand is for consumer-oriented product in which the U.S. industry has very little representation. Another reason is that the U.S. industry generally lacks the personal relationships that are so important in doing business in Japan.

For these and other reasons, we believe it will be difficult for the U.S. industry to achieve a 20% market penetration within the

EKD 10/03/2003

STN

five-year period of the agreement, and those gains that are made will most likely accrue to U.S. companies with broad product lines and Japanese manufacturing facilities. This principally includes Motorola and Texas Instruments at the present time. And, we believe, any incremental purchases of devices will likely be pointed toward mature, low-technology products and not toward supporting the U.S. industry's state-of-the-art effort by purchasing high-technology devices if they are at all available in Japan. Therefore, we would not expect to see those companies known for state-of-the-art products (e.g., Intel) gain much more market share from this agreement than they would have gotten otherwise. As mentioned, since some 50% of the Japanese semiconductor market is comprised of consumer circuits, it will be difficult for U.S., companies to serve it. Possibly, the best situated company in this regard is Motorola, which has a broad range of discrete components used in consumer applications. Since Motorola also has a strong position in the U.S. automobile market, an additional opportunity exists for the company in the Japanese automotive industry, which currently purchases under 1% of its needs from U.S. vendors.

SH Point of View

EKD 10/03/2003

STN

TEXT

POINT OF VIEW

During the past few weeks, Baker International has reached agreements to acquire the assets of two companies in the mud logging and mining equipment businesses. both deals are relatively small (the mud logging deal especially so) and neither is expected to have a significant impact on near-term results. However, both deals should add to the company's long range earnings power. These deals continue Baker's pattern of making niche acquisitions designed to bolster the market position of businesses in which it is already involved. While no acquired company by itself is likely to have much influence on Baker's earnings potential, the cumulative impact of several niche acquisitions is likely to be considerable. In our view, the more successful niche acquisitions Baker is able to make, the closer its earnings power will get to the top end of our estimated \$2.25-3.50 a share range.

Management's strong support for the \$0.92 dividend rate has helped stabilize the stock around the 14-15 level. While the dividend is not as well protected as is Schlumberger's (SLB - 31 1/2; BUY), we attach a very high probability to continuation of the current rate for at least the next 2-3 years. With a current yield of 6.5%, downside risk does not appear to be especially large. We continue to believe that a sizeable proportion of Baker's long range earnings power will be **determined** by the number, size and quality of its acquisitions during the trough. We consider the pattern of niche deals indicated by the recent asset acquisitions to be a mild long-term positive for the stock. It will take additional attractive deals or evidence that oil and gas prices will soon be turning before we would raise our NEUTRAL (1) rating on the stock.

SH Discussion

TEXT

Discussion

The two recent deals are the purchase of the mud logging units owned by the Core Laboratories subsidiary of Litton Industries and a definitive agreement to purchase certain mining equipment assets owned by National Mine Service. The mud logging deal was relatively small, involving less the \$1 million cash. It will add 90 mud logging units, including 20 that are outfitted for the North Sea, to the already large fleet operated by Baker's Exploration Logging (EXLOG) mud logging subsidiary. While the units are not as sophisticated as those operated by Exlog, the subsidiary did pick up 41 existing contracts in the deal. In addition, a medium-sized competitor was eliminated.

The agreement with National Mine Service is much larger, although it involves only a **small amount** of cash up front. The *****deal***** must be

approved by the Federal Trade Commission before it can close. The mining

equipment assets that Baker has agreed to acquire are generating revenues of around \$45 million and have been producing little or no cash flow. While the integration into Baker's Eimco subsidiary will result in consolidation savings, the costs of integrating the businesses will offset any earnings contribution from the National Mine Service assets

STN

during the next year or so.

On a long-term basis, Baker Eimco will have virtually a full line of underground mining equipment, with the exception of long wall miners. With a full complement of service centers in the Appalachian coal region, Eimco will be better able to compete with Joy Manufacturing (which is by far the leader in the mining equipment business) than was National Mine Service alone.

SH Bowater Stores

TEXT

Q: How will the Bowater stores affect gross margins when they are re-opened with the HD format?

A: These units will be re-opened only when all layout modification and merchandising changes have been completed. These stores are not expected to have a significant impact on gross margins. About 75% of the merchandise mix is the same as HD's. Most of the inventory is new and highly salable. Only the auto parts and a small amount of housewares lines will be discontinued.

Q: Is the Bowater acquisition dilutive?

A: It is operating profitability and will be anti-dilutive in 1985.

Q: How many units are included in the same-store calculations?

EKD 10/03/2003

STN

A: Only stores open 15 months or longer are included, thus avoiding the distorting effects of grand opening promotions.

Q: What is the expected pattern of Bowater's profitability next year?

A: The company will not be profitable in the interim periods, generating all its profits in the final quarter.

SH Sales Disappointments

TEXT

Q: Review any areas of sales disappointment, either geographically or mix-wise.

A: Sales started slackening in the June-July period, related, in management's opinion, partly to concern over upcoming elections. Sales in the Georgia stores have been slowed by unseasonably warm weather. Items sensitive to weather have generally been weaker -- this trend has not affected inventory levels, however, because of HD's "buy-as-needed" purchasing policy.

SH Competition from Home Centers of America

TEXT

Q: Comment on competition from Home Centers of America (a division of K mart).

A: Although management has not yet visited these stores, the company is now well-capitalized and must be viewed as a major competitive force. HD will begin competing directly with HCA in 1985 in Houston and probably in Detroit. In management's opinion, Detroit can support 12 to 15 warehouse competitors. DLJ Note: We approve of HD's sharp expansion efforts, but have some concern about whether Detroit is a good early choice for this effort.

SH Stockkeeping Units

TEXT

Q: Is management satisfied with the current number of stockkeeping units (SKUs)?

A: It is possible that the company is carrying some "dead wood." The new point-of-sale (POS) information system will help to identify these areas. In many cases, the appropriate action is not simply to discontinue those SKUs, but rather to modify pricing, promotion, presentation, etc. Moreover, "deadwood" in some markets or stores may be highly productive in other markets/stores. The new POS system adds flexibility, which allows management to deal effectively with this kind of situation as well. DLJ Note: The new systems should be a big help in tightening and improving HD's merchandising effort. It should be noted that other home-center warehouse stores operate with significantly fewer SKUs.

SH Competition From Payless Cashways

STN

TEXT

Q: Comment on competition from Payless Cashways in Phoenix.

A: PCI is a good competitor. It is possible for both HD and PCI to operate successfully in the same markets because each targets different market niches, while both are able to gain share from weaker merchants. HD will face competition from PCI in Houston and Dallas as well.
